

Figure S4. Secondary necrosis of apoptotic cells in inflammasome stimuli-treated *Gsdmd*^{-/-} cells. **A.** WT and *Gsdmd*^{-/-} BMDM were primed with LPS for 4 hours and stimulated with nigericin for different periods of time as indicated. LDH release was measured and shown. **B.** The same as in A except that WT and *Gsdmd*^{-/-} RAW-asc cells were used. **C.** WT and *Gsdmd*^{-/-} BMDM were primed with Pam3csk4 for 5 hours or LPS for 4 hours and then stimulated with nigericin for different periods of time as indicated. Images were taken at the time points indicated. **D.** WT and *Gsdmd*^{-/-} RAW-asc cells were primed with LPS for 4 hours and stimulated with nigericin for different periods of time as indicated. Images were taken at the time points indicated.
