## Supplemental Figure I. Flow diagram of search for trials

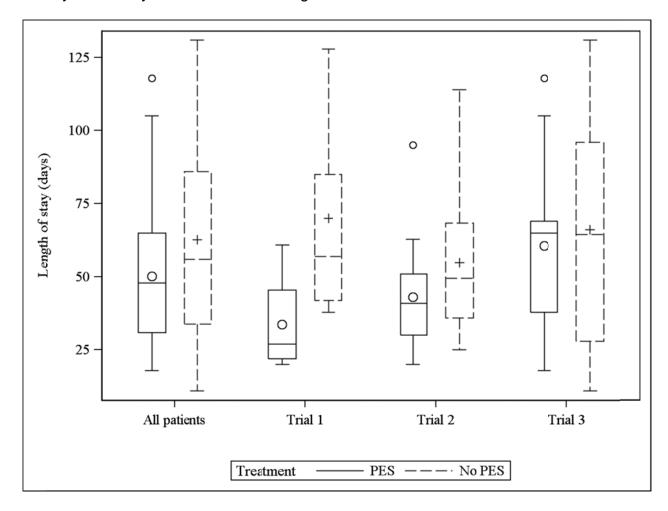

#### CONFIDENTIAL 20151023

# **Supplemental Figure II**. Dysphagia Severity Rating Scale, in subgroups (as for penetration aspiration score in Figure 2)

**Supplemental Figure III**. Box and whisker plot of length in stay in hospital after randomisation, by source trial. Comparison of PES versus no PES by multiple linear regression with adjustment, overall mean difference -16.2 (95% CI -36.2, 3.7; p=0.11). Note: one patient randomised to sham PES with length of stay of 365 days excluded to make figure more clear.
