

Figure S2. Expression data of ETR1, ETR2, ETR5, ETR6, ETR7 during fruit ripening extracted using TomExpress platform. Five fruit developmental stages have been studied: Immature Green (IMG), Mature Green (MG), Breaker (B), 5 days after Breaker (B+5), 10 days after Breaker (B+10). For each gene, the plot represents normalized counts per base for RNA-Seq data released from transcriptome analyses in multiple tomato cultivars.
