

SUPPLEMENTARY FIGURE 11 | Specific inhibition of COX complex activity by KCN. (A) Exemplary COX activity measurement with 10 μ g of WT mitochondrial protein in the presence (red line) or absence (blue line) of 1 mM KCN. **(B)** Mitochondrial complexes from WT plants were separated by gradient BN-PAGE and subsequently stained in gel for COX complex activity in the presence of 2.5 mM KCN, as a control for the specificity of the activity staining.
