

Supplementary Data

SUPPLEMENTARY FIG. S1. Differentiation potential of $\beta 7^+$ hematopoietic stem cells (HSCs). (A) Single-cell colony-forming efficiency of the indicated hematopoietic stem and progenitor cells. (B) Gating strategy used for lineage analysis. (C) Frequency of donor-derived cells in the peripheral blood of recipient mice at 16 weeks after transplantation with 100 test cells plus 2×10^5 competitor whole bone marrow (WBM) cells. Data are mean \pm SEM ($n = 13$ per group, from three independent experiments).
