

S6 Fig. Effect of the *vps35-Δ* mutation on growth of strains with or without the *PMR1* gene. Cell suspensions with equal densities were serially diluted (10-fold) and spotted onto corresponding media. Two subclones of each strain were analysed. *pmr1-Δ vps35-Δ*, 1MA27/12/GP1-Δ*vps35* strain lacking the plasmid with *PMR1*; *vps35-Δ*, 1MA27/12/GP1-Δ*vps35* strain, *pmr1-Δ VPS35*, 1MA27/12/GP1 strain lacking the plasmid with *PMR1*; *PMR1 VPS35*, 1MA27/12/GP1 strain.
