Supplementary Figure S1. Complementation test between *mc-vin* and *mc* (accession number LA2460) mutant plants. Complementation test was carried out by crossing a *mc-vin* mutant as female parent (A) with a *mc* mutant plant (B). All of the F1 plants produced reverted inflorescences and flowers with leafy-like sepals (C). Scale bars: 1 cm.

Supplementary Figure S2. Distribution of differentially up-regulated and down-regulated expressed genes in the *mc-vin* mutant relative to the wild-type Moneymaker cultivar in Gene Ontology (GO) annotation under (A) biological processes and (B) molecular functions categories.

Supplementary Figure S3. Validation of the gene expression data obtained by the microarray using qRT-PCR. The panel show a comparison of the LogFC in expression levels measured by the microarray and qRT-PCR assays of 15 differentially expressed genes in the *mc-vin* mutant relative to the wild-type Moneymaker cultivar chosen at random from the microarray data.

Supplementary Table S1. Differentially up-regulated expressed genes in the *vegetative inflorescence (mc-vin)* mutant relative to the wild-type Moneymaker cultivar (adjusted p-value <0.05)
