S3 Figure. Global fitting when assessing an interconversion model:

$(A_{Inactive} \overset{k1}{\underset{k2}{\longleftrightarrow}} A^*_{Active} + B \overset{k3}{\underset{k4}{\longleftrightarrow}} C)$. The solid black lines are the globally fitted data according to

an interconversion model (eqn 5) for *Pf*AMA1-F**Pf*RON2sp1 **(A, B)** and ΔDII-*Pf*AMA1-

F**Pf*RON2sp1 **(C, D)** at 20 °C (blue), 25 °C (yellow) and 30 °C (red).
