Running Title: Wild Yeast Harbor Distinct Amyloid Structures

Keywords: prion; amyloid; aggregation; variants; yeast; adaptation

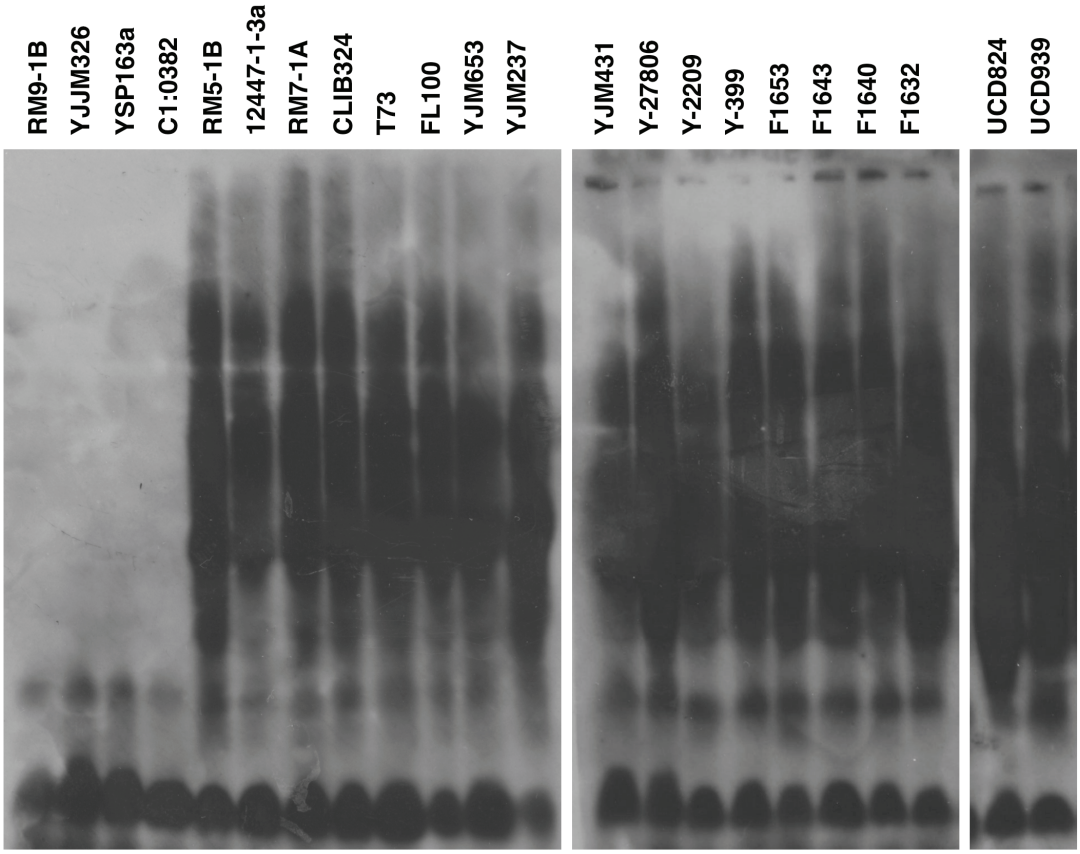

Fig S1. [*RNQ*$^{+}$] prions are efficiently cytoduced and propagated in 74-D694 yeast. Cell lysates from 74-D694 yeast cytoduced with wild [*RNQ*$^{+}$] prions were incubated for 7 minutes at 25°C and subjected to SDD-AGE and western blotting using an anti-Rnq1 antibody.

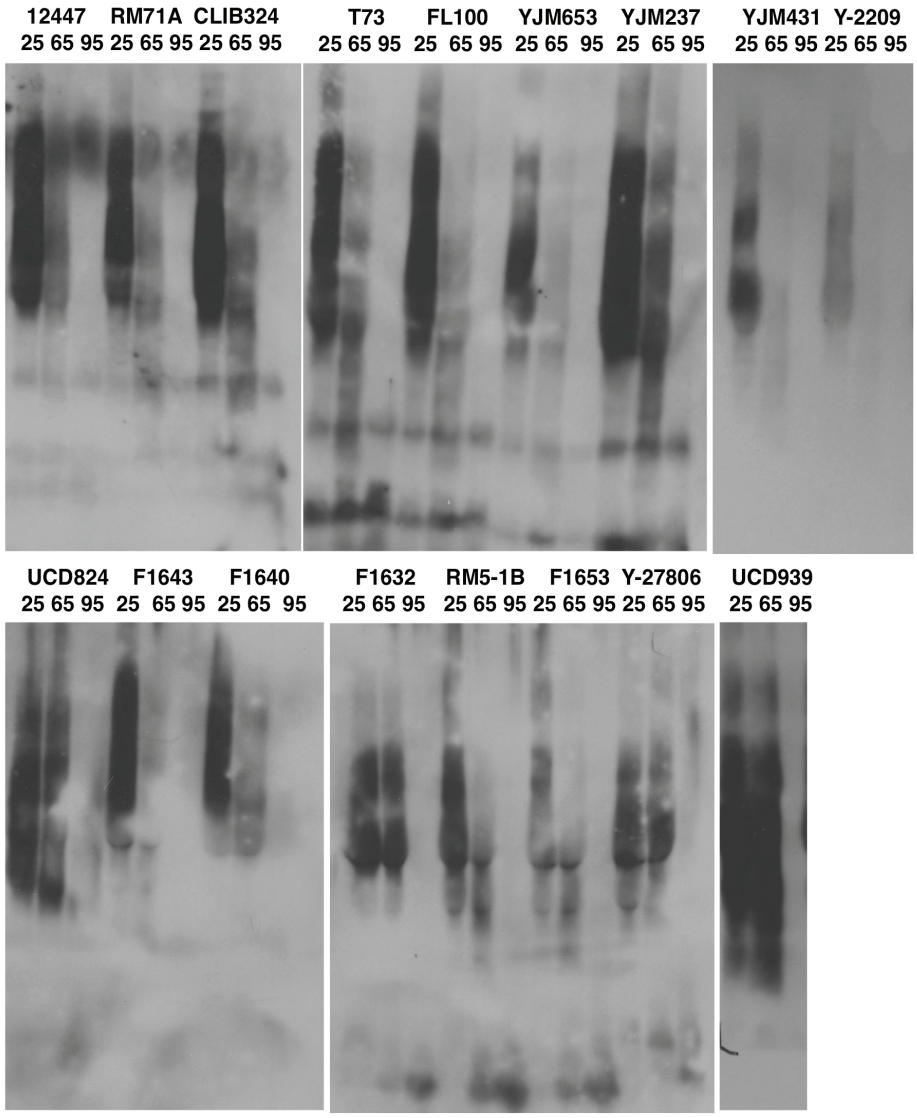

Fig S2. [*RNQ*$^{+}$] variants can be distinguished by differences in temperature sensitivity. Cell lysates from 74-D694 yeast cytoduced with wild [*RNQ*$^{+}$] prions were incubated for 7 minutes at 25°C, 65°C or 95°C. Lysates were then subjected to SDD-AGE and western blotting using an anti-Rnq1 antibody.
