## **Supplemental Material**

# **Chronic Exposure to Arsenic and Markers of Cardiometabolic Risk—A Cross-Sectional Study in Chihuahua, Mexico**

Michelle A. Mendez, Carmen González-Horta, Blanca Sánchez-Ramírez, Lourdes Ballinas-Casarrubias, Roberto Hernández Cerón, Damián Viniegra Morales, Francisco A. Baeza Terrazas, María C. Ishida, Daniela S. Gutiérrez-Torres, R. Jesse Saunders, Zuzana Drobná, Rebecca C. Fry, John B. Buse, Dana Loomis, Gonzalo G. García-Vargas, Luz M. Del Razo, and Miroslav Stýblo

### **Table of Contents**

**Table S1.** Urinary As metabolites by quartile of total speciated urinary As: Median (25<sup>th</sup>-75<sup>th</sup> percentile).

**Table S2.** Associations between water and urinary arsenic and continuous indicators of cardiometabolic risk: Coefficient 95% CI.

**Table S3.** Joint effect of water arsenic combined with arsenic metabolism indicators on cardiometabolic risk: Odds ratios (95% CI).

**Table S1.** Urinary As metabolites by quartile of total speciated urinary As: Median (25<sup>th</sup>-75<sup>th</sup> percentile).

	All participants <sup>1</sup>	<27.1	Total speciated urinary As quartile ( $\mu\text{g/L}$ )		
			$\geq 27.1$ -<55.8	$\geq 55.8$ -105	$\geq 105$
DMA <sub>s</sub> ( $\mu\text{g/L}$ )‡	42.2 (20.5-77.6)	9.9 (4.9-15.9)	30.4 (25.6-36.5)	55.6 (48.5-67.8)	113.1 (91.1-143)

\*P<0.05 \*\*P<0.10 for coefficient (95% CI) from linear models adjusted for age and gender; multivariable models also include education, smoking status, alcohol consumer, recent seafood intake, weight status, elevated waist circumference and water source. Urinary As models additionally adjusted for log-transformed urinary creatinine and > median % DMA<sub>s</sub>, Mas, and iAs in urine. Urinary As = Σ[dimethylated (DMA<sub>s</sub>), mono-methylated (Mas) and inorganic (iAs) species].

<sup>#</sup>Ln urinary As by elevated %DMA<sub>s</sub> (>76.6%) interaction P<0.10 in both age/gender- and multivariable-adjusted models, evaluated using product terms.

<sup>†</sup>Ln water As by elevated %DMA<sub>s</sub> (>76.6%) interaction P<0.10 in both age/gender- and multivariable-adjusted models, evaluated using product terms.

<sup>a</sup>*Exclusions:* Fasting and 2-hour glucose were analyzed among individuals not reporting use of diabetes medication; SBP and DBP analyzed among individuals not reporting use of hypertensive medication. Diabetes and hypertension medicine reported to be used by n=87 and 130 individuals respectively in the primary analysis sample (n=81 and 126 with water As measures). <sup>b</sup>*No diabetes:* Excludes individuals with fasting plasma glucose ≥126 mg/dL, 2h plasma glucose ≥200 mg/dL, or self-reported diabetes diagnosis.

\*P<0.05 \*\*P<0.10 for adjusted odds ratios (95% CI) for elevated cardiometabolic risk associated with increasing concentrations of water As combined with As metabolism indicators; the referent are individuals in the lowest quartile of water As with < median levels of each As metabolism indicator. Results come from multinomial or logistic models adjusted for age, gender, smoking status, alcohol consumer, BMI, elevated waist circumference and main water source (well, treatment plant, other). The referent group for all ORs is subjects with the metabolism indicator below the median in the lowest quartile of water As.

#P<0.10 indicates additive interaction between levels of each metabolism indicator and quartiles of water As (methods as in Vanderweele and Knoll 2014); values **bolded**.

*Diabetes:* fasting plasma glucose (FPG) ≥126 mg/dL, 2h plasma glucose (2HPG) ≥200 mg/dL, or self-reported diabetes diagnosis or medication use. Pre-diabetes: FPG ≥110-<126 mg/dL or 2HPG ≥140 mg/dL. *Median cutoffs* used to defined high vs. low concentrations of each As metabolism indicator as follows: %DMAs = 76.6%; %MAs = 14.1%; DMAs/MAs = 5.441; MAs/iAs = 1.579. *Hypertension:* systolic blood pressure >140 mm Hg, diastolic blood pressure >90 or hypertensive medication use.
