

Supplemental Figure 1. Kinetics of B8R-specific CD8⁺ T cell response in the lungs. WT and MHCII^{-/-} mice were infected with 10³ PFU of VACV intranasally (i.n.) or intraperitoneally (i.p.). B8R-specific CD8⁺ T cells were identified by staining with B8R tetramer and anti-CD8 α Ab at the indicated times. Data are representative of two independent experiments with four mice per group. **, $p < 0.01$; ***, $p < 0.001$.
