

S1 Fig. *M. fortuitum* induces HKM apoptosis.

(A) Hoechst staining of STS treated (positive control), uninfected and *M. fortuitum*-infected HKM. (B) AV^{FITC}/PI staining of STS treated (positive control), uninfected and *M. fortuitum*-infected HKM. The images were observed under fluorescence microscope ($\times 40$). All the experiments were performed 24 h p.i. The images are representative of three independent experiments.
