

SUPPLEMENTARY FIG. S3. Flow cytometry for IFN- $\lambda 4$ orthologs with MAB-IFN- $\lambda 4$. Flow cytometry images of HepG2 cells transfected in triplicates with expression constructs that produce IFN- $\lambda 4$ -Halo orthologs. Negative controls—cells transfected with empty Halo-tag vector, untransfected, and unstained cells. Staining was done with the MAB-IFN- $\lambda 4$. Representative images and summary plots are presented in Fig. 4.
