

Supplementary Information

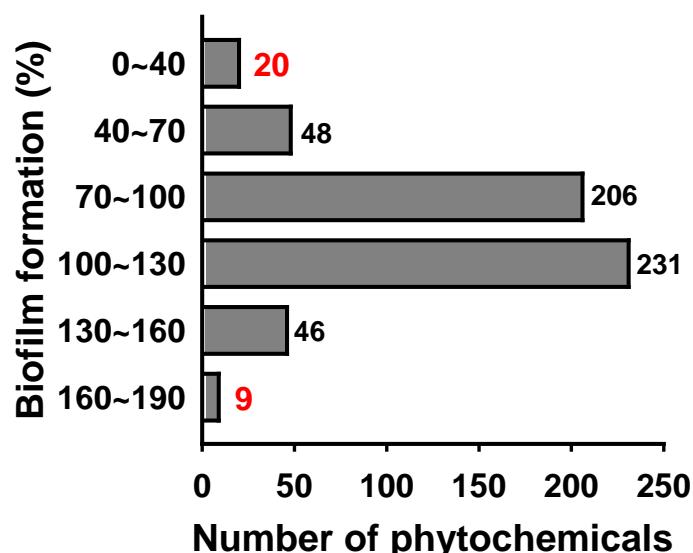

Calcium-chelating alizarin and anthraquinones inhibit biofilm formation and the hemolytic activity of *Staphylococcus aureus*

Jin-Hyung Lee^{1*}, Yong-Guy Kim^{1*}, Shi Yong Ryu², and Jintae Lee^{1†}

Supplementary Figure S1. Histogram of *S. aureus* biofilm formation in the presence of each of the 560 phytochemicals. Biofilm screening for *S. aureus* MSSA 6538 was performed at a concentration of 10 µg/ml in 96-well plates after culture for 24 h. Numbers on the right indicate numbers of phytochemicals. Biofilm formation (%) on the Y-axis represents changes in biofilm formation, that is, biofilm formation in the presence of a phytochemical is expressed as a percentage of biofilm formation in its absence.

Supplementary Figure S2. Biofilm formation by *Escherichia coli* O157:H7 (a) or *Pseudomonas aeruginosa* PAO1 (b) in the presence of alizarin in LB medium after culture for 24 h. Two independent experiments were conducted (total 12 wells); error bars indicate standard deviations.

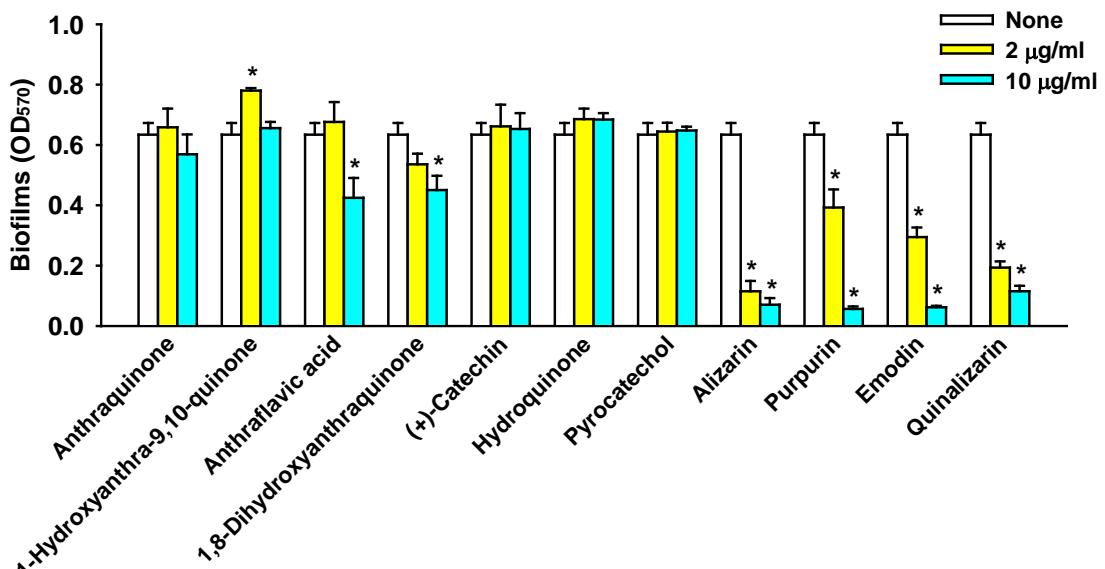

Supplementary Figure S3. Cell growth of *S. aureus* in the presence of alizarin. Planktonic cell growth of *S. aureus* MSSA 6538 was measured by counting CFUs in 250 ml-flasks agitated at 250 rpm.

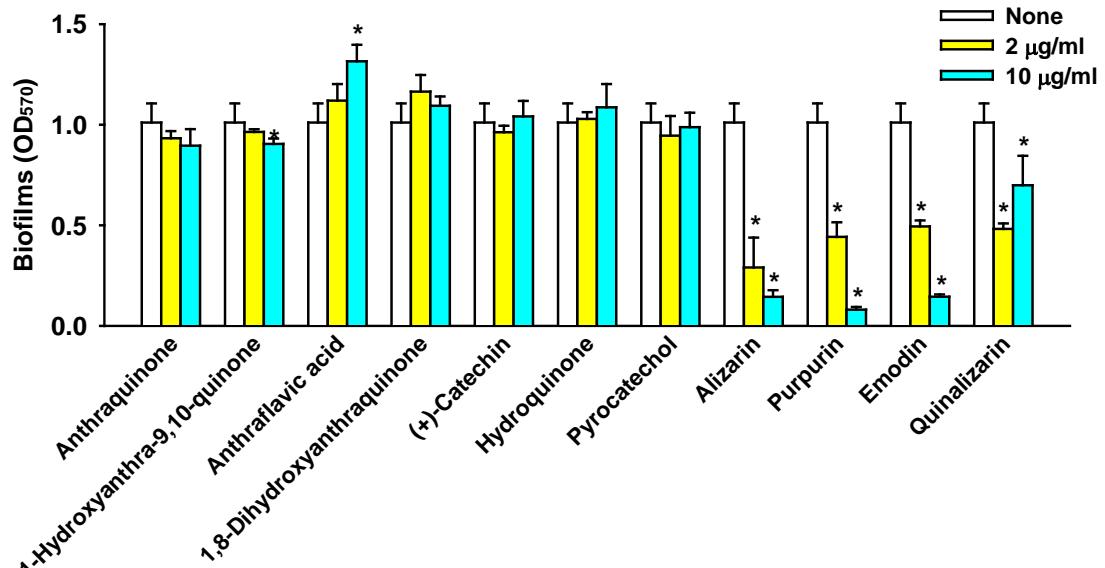

Supplementary Figure S4. Inhibitory effects of alizarin-related compounds on biofilm formation. Biofilm formations by MSSA 25923 (a) and MRSA MW2 (b) were quantified in the presence of the selected compounds at 0, 2, or 10 µg/ml after incubation for 24 h in 96-well plates without shaking. At least two independent experiments were conducted (total 12 wells). Error bars indicate standard deviations. *, P<0.05 versus non-treated controls.

a MSSA 25923

b MRSA MW2

Supplementary Table S1. COMSTAT results for biofilm inhibition by alizarin against three *S. aureus* strains

Strain	Alizarin	Volume/Area ($\mu\text{m}^3 \mu\text{m}^{-2}$)	Mean thickness (μm)	Substratum coverage (%)
MSSA 6538	None	12 \pm 1	11 \pm 1	99 \pm 1
	2 $\mu\text{g}/\text{ml}$	7.3 \pm 0.9	6.7 \pm 0.7	84 \pm 9
	10 $\mu\text{g}/\text{ml}$	0.9 \pm 0.2	0.7 \pm 0.1	32 \pm 9
MSSA 25923	None	4.0 \pm 0.5	3.8 \pm 0.6	88 \pm 10
	2 $\mu\text{g}/\text{ml}$	2.5 \pm 0.3	2.7 \pm 0.3	66 \pm 4
	10 $\mu\text{g}/\text{ml}$	0.8 \pm 0.3	0.9 \pm 0.3	24 \pm 9
MRSA MW2	None	5.5 \pm 0.6	5.8 \pm 0.9	91 \pm 7
	2 $\mu\text{g}/\text{ml}$	1.7 \pm 0.3	2.8 \pm 0.5	35 \pm 5
	10 $\mu\text{g}/\text{ml}$	1.6 \pm 0.2	1.9 \pm 0.2	37 \pm 7

Supplementary Table S2. Cell counting in the biofilms affected by alizarin. Biofilms were produced in 96-well polystyrene plates over 24 h with or without alizarin (0, 2, 10, or 100 µg/ml) and then washed three times with PBS. Biofilms were then resuspended in 300 µl PBS, disrupted by pipetting vigorously for 60 sec and vortexing for 30 sec, and CFUs were measured. Three independent experiments were conducted.

Strains	None	Alizarin 2 µg/ml	Alizarin 10 µg/ml	Alizarin 100 µg/ml
MSSA 6538	159 ± 10 $\times 10^6$	86 ± 13 $\times 10^6$	21 ± 2 $\times 10^6$	N/A
MSSA 25923	167 ± 11 $\times 10^6$	102 ± 15 $\times 10^6$	49 ± 5 $\times 10^6$	N/A
MRSA MW2	41 ± 6 $\times 10^6$	10 ± 4 $\times 10^6$	4 ± 1 $\times 10^6$	N/A
<i>S. epidermidis</i>	40 ± 6 $\times 10^6$	N/A	12 ± 2 $\times 10^6$	5 ± 1 $\times 10^6$

Supplementary Table S3. Sequences of the primers used for quantitative RT-PCR.

Gene	Name	Primer
<i>16S rRNA</i>	A component of ribosomes	Forward 5'-TGT TTG ACG ATG TTT GAG CA-3' Reverse 5'-CCT TCC TCC AGT TCA GAT GC -3'
