

SUPPLEMENTAL FIGURE 1 $K_{1\text{-Water}}$ ($\text{mL} \cdot \text{cm}^{-3} \cdot \text{min}^{-1}$) and $K_{1\text{-PiB}}$ ($\text{mL} \cdot \text{cm}^{-3} \cdot \text{min}^{-1}$) values (grouped by diagnosis with means and standard deviations) are shown for primary cortical regions (typically with significant beta-amyloid load in

AD) and CER and PON (usually without significant beta-amyloid deposition). Values are adjusted for CSF dilution. The AD subject with $K_{I\text{-Water}}$ values higher than controls (CON) exhibited significant cortical atrophy, contributing to high $K_{I\text{-Water}}$ values after correcting for CSF dilution.
