

Figure 8: Effect of HAs on the MSC mediated induction of Tregs. Frequency of Tregs (CD25+CD127-) within CD4+ T cells is shown. \diamond CD4+ T cells alone; \square CD4+ T cells and MSCs. Shapes filled with black stand for 1.6 MDa HA; dark gray, digested-(D) 1.6 MDa HA or 150 kDa HA; light gray, 7.5 kDa HA and white, no HA. Each shape/dot indicates the mean of three experimental replicates with error bars representing 95% CI. * $p < 0.05$, ** $p < 0.01$ and *** < 0.001 .
