

A.

B.

Supplemental Figure 3. Endogenous ZNF24 protein levels do not exhibit significant differences among HMVEC-D, HMVEC-L and HMVEC-M cells.

Endogenous ZNF24 and GAPDH levels in HMVEC-D, HMVEC-L and HMVEC-M cells were analyzed by immunoblotting (A) and quantified by densitometry using Photoshop CS5 (B). N.S.: not significant
