

Figure S4. Gliomas initiated in Pax3-Tv-a mice can spread throughout the brain. Representative H&E staining of high grade BSG initiated in Pax3-Tv-a mice by PDGF-B, Cre, and H3.3K27M. Areas indicated with a black box show tumor cells in locations other than the primary tumor in the midbrain (shown in A). 2.5x magnification, scale bar is 400 μm .
