

HCT116 cells

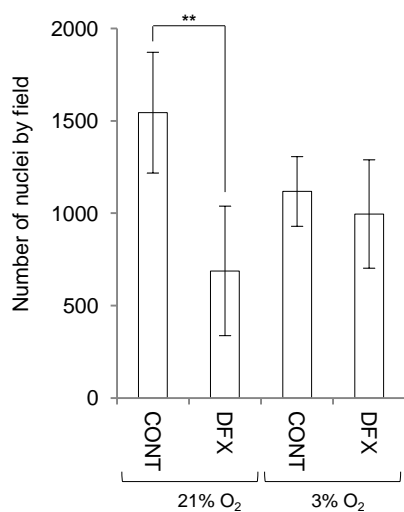

Figure S2.

Number of nuclei of HCT116 human colon carcinoma cells cultivated at 21% or 3% of oxygen in non-treated condition (CONT) or 3 days after treatment with 10 μ M of deferasirox (DFX) in non-irradiated condition. The number of nuclei are expressed as mean \pm standard deviation (S.D.). One-way ANOVA was performed between DFX treatment and CONT in the two conditions of oxygenation (**, p-value \leq 0.01).
