

ESM Figure 3. Diabetic stimuli increased FKN and CX3CR1 protein production in MMCs. FKN protein levels in lysates (a) and media (b) were measured by ELISA and CX3CR1 (c-e) levels were determined by Western blot analysis. Data are mean \pm SE or representative Western blots of four experiments. * $p < 0.05$ vs. Con; Con, control; MAN, 24.4 mmol/l mannitol; HG, 30 mmol/l D-glucose; OA, 100 μ mol/l oleic acid; TGF, 10 ng/ml transforming growth factor- β 1.
