

Supplemental Figure 1. OvCa and normal plasma reactivity to DISGTNTSRA by ELISA. OvCa patient (n=47) and normal (n=40) plasma samples were assessed for anti-DISGTNTSRA antibodies by ELISA. Lines represent median of each group. **P*-value = 0.0058 by Mann-Whitney test. The open circle indicates patient sample DM778 that was used in identifying DISGTNTSRA peptide (see Table 1).
