

SUPPLEMENTARY FIGURES AND TABLES

Supplementary Figure S1: Western Blot analysis of EMMPRIN expression in tumor tissues. Three representative tumors from each group were isolated from mice and subjected to Western Blot as described in Materials and Methods.

Supplementary Figure S2: Immunofluorescence images of tumor sections stained with anti-EMMPRIN antibody. Green and red represent BMDCs and EMMPRIN⁺ cells, respectively. As shown in these images, EMMPRIN expression (red) is colocalized with BMDCs (green), resulting in yellow signals.

Supplementary Table S1: Proteins and their signals detected by the RayBio® arrays. Only those proteins with over 2 fold change, either greater or smaller, are listed.

Protein	LLC-Control	LLC-EMMPRIN ^{Lo}	LLC-EMMPRIN ^{Lo} / LLC-Control
