Supplementary Information

Supplementary Figure S1. Chromosomal location and clustering of 142 MADS-box genes identified in apple. The chromosome number is indicated on the top of each chromosome. The color code represents the MdMADS belonging to different sub-families. The box indicates the 29 gene clusters on 17 apple chromosomes.

Supplementary Figure S2. Tandem and segmental duplication events in *MdMADS-box* gene family.

Supplementary Figure S3. Collinear genes pairs of *MdMADS-box* genes on all 17 apple chromosomes. Red lines indicate segmental duplication of *MdMADS-box* on 17 apple chromosomes, and grey lines represent collinear segments other than *MdMADS-box* genes.

Supplementary Figure S4. Phylogenetic tree of SVP orthologs of apple and other eudicots (Arabidopsis, peach, poplar, cucumber and grape).

Supplementary Figure S5. Relative expression of various MdMADS genes based upon FPKM based expression value and validated by quantitative reverse transcriptase-polymerase chain reaction (qRT-PCR). Pearson correlation coefficient between fold change FPKM and qRT-PCR was 0.34 (p-value=0.0005)

Supplementary Figure S6. Degree distributions of reproductive and vegetative phase network. The scatter plots show proteins (x-axis) versus the probability of a protein having k connections (y-axis). The reproductive phase network indicates scale-free nature.

Supplementary Table S1. List of MdMADS, their annotation and orthologs in Arabidopsis.

Supplementary Table S2. Comparison of MdMADS identified in present study with that of MdMADS identified by Tian et al. (2015).

Supplementary Table S3. The sample abbreviation and their collection intervals.

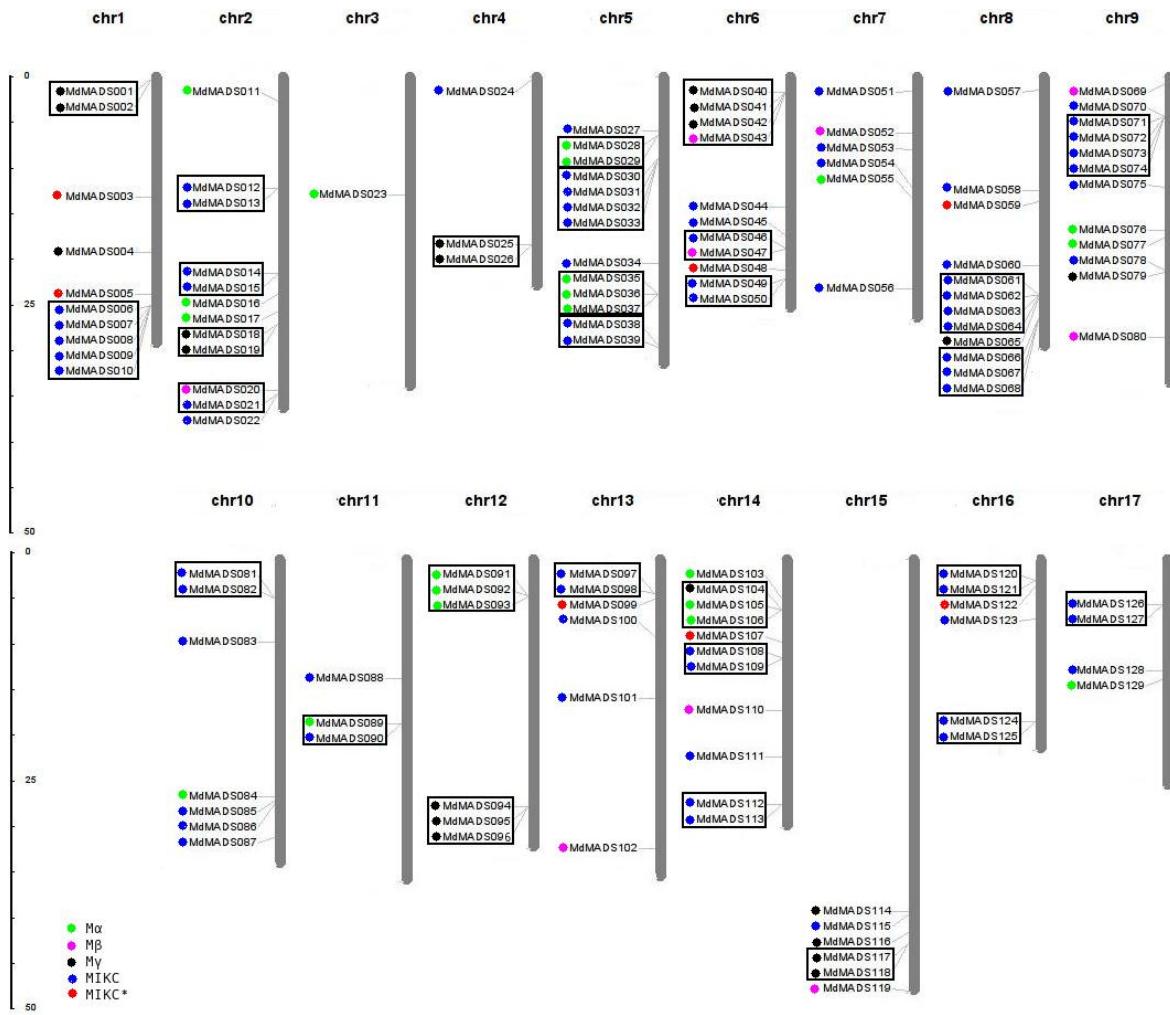

Supplementary Table S4. List of low temperature responsive elements in 1.5Kb upstream promoter regions of MdDAMs.

Supplementary Table S5. List of DNA binding site sequence for MdMADS proteins identified in apple.

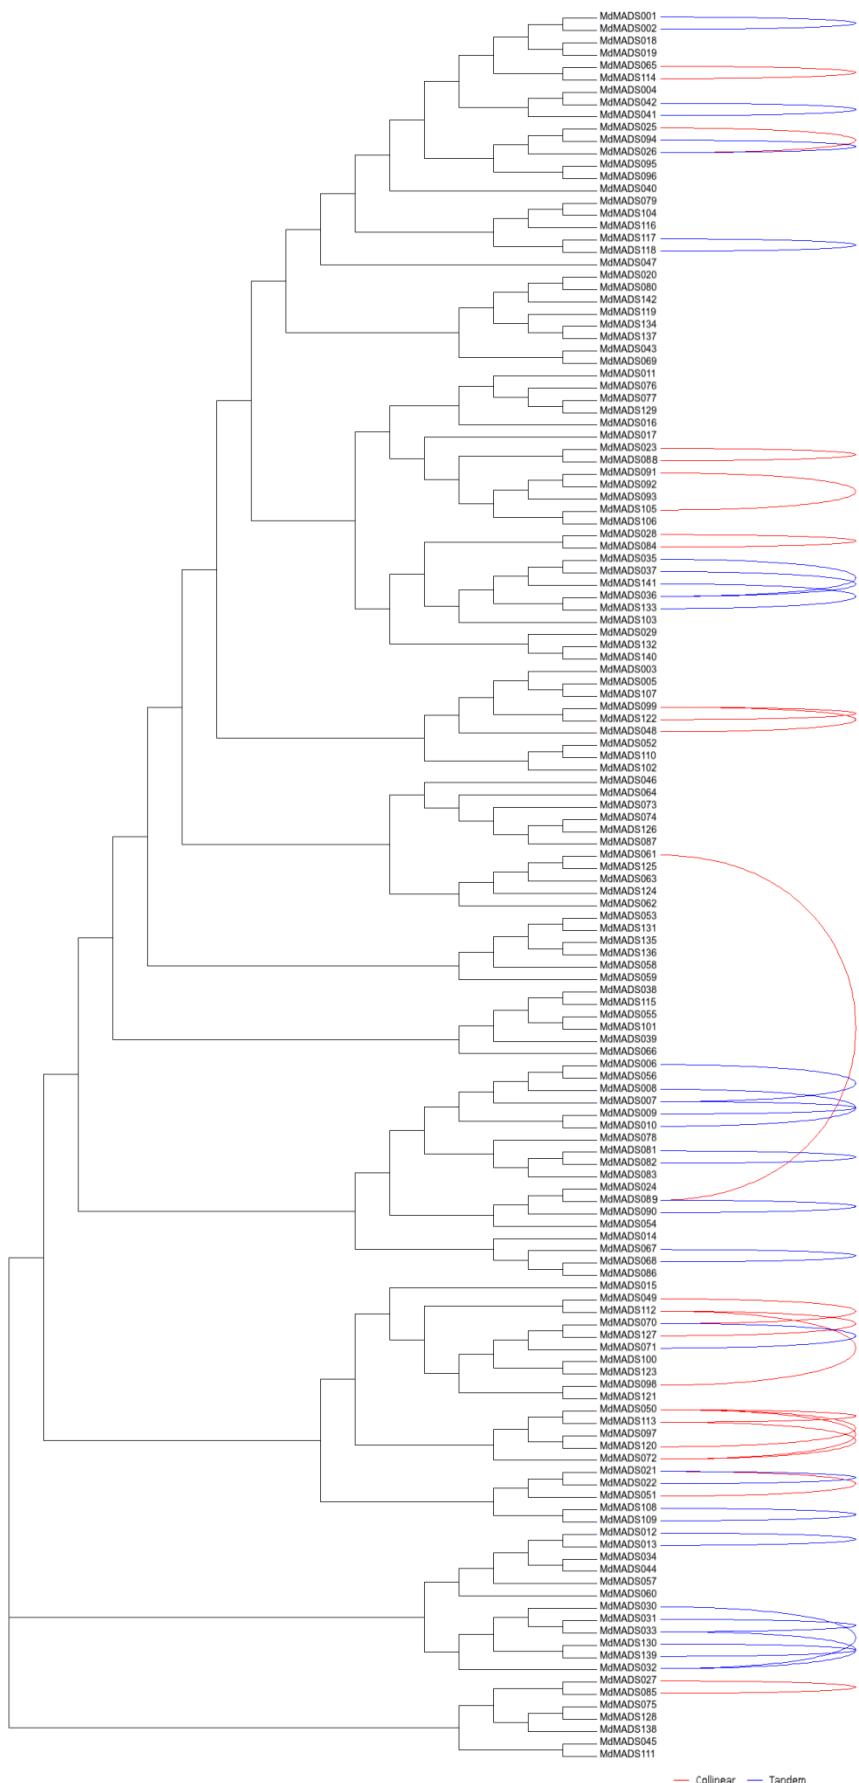

Supplementary Table S6. List of hub proteins and their interacting partners in Arabidopsis identified through protein-protein interaction network and their orthologs in apple.

Supplementary Table S7. Over-represented biological process and molecular function gene ontology terms associated with reproductive phase network proteins.

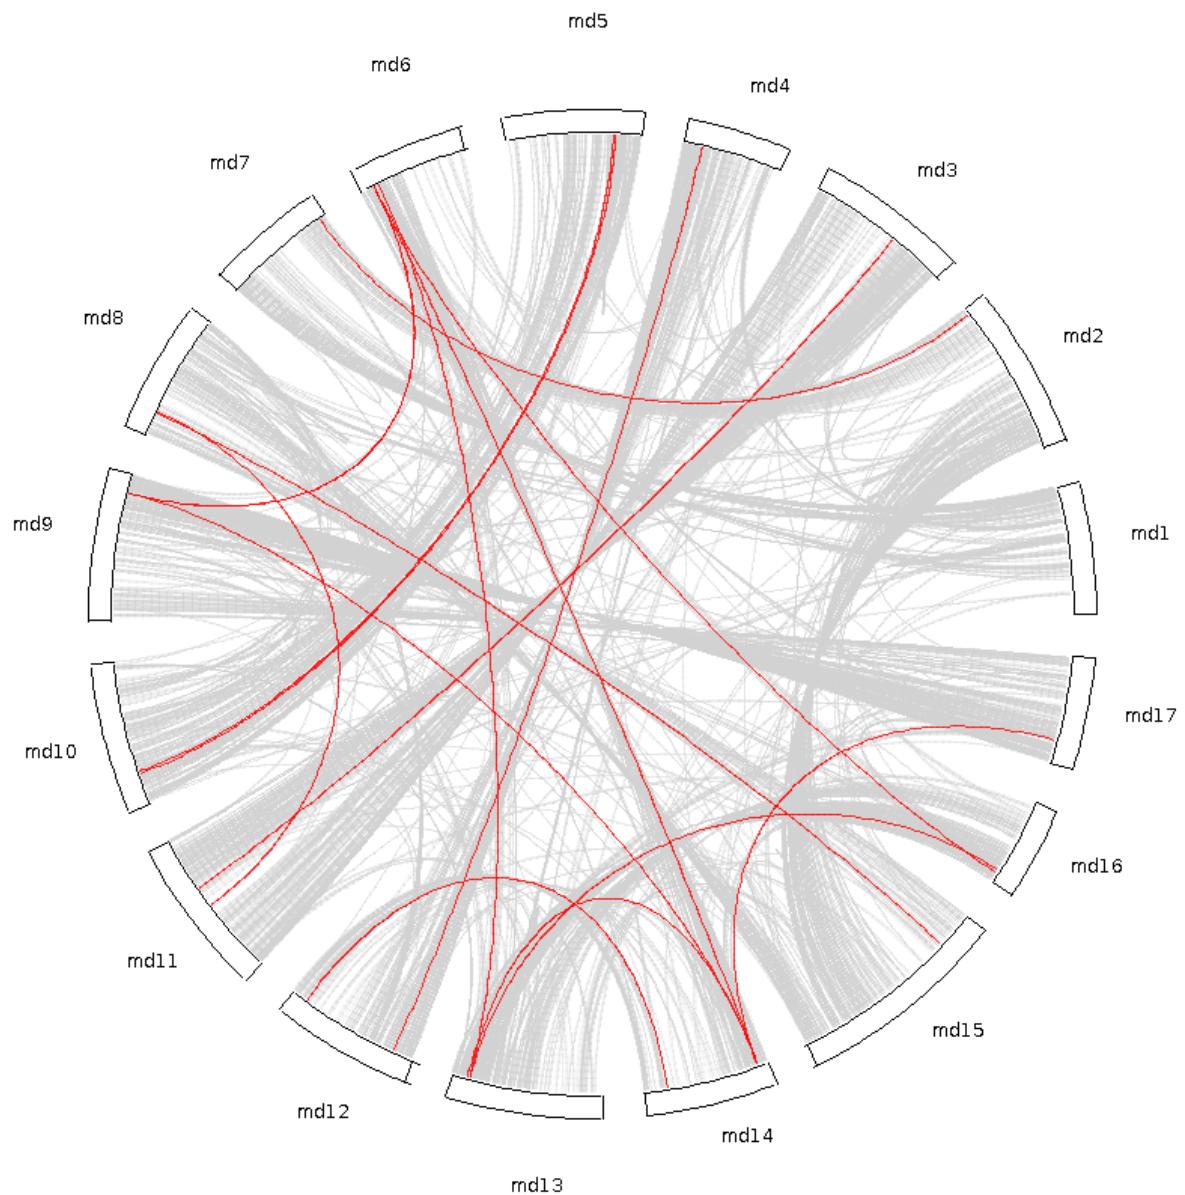

Supplementary Table S8. List of primer sequence of randomly selected 10 MdMADS genes.

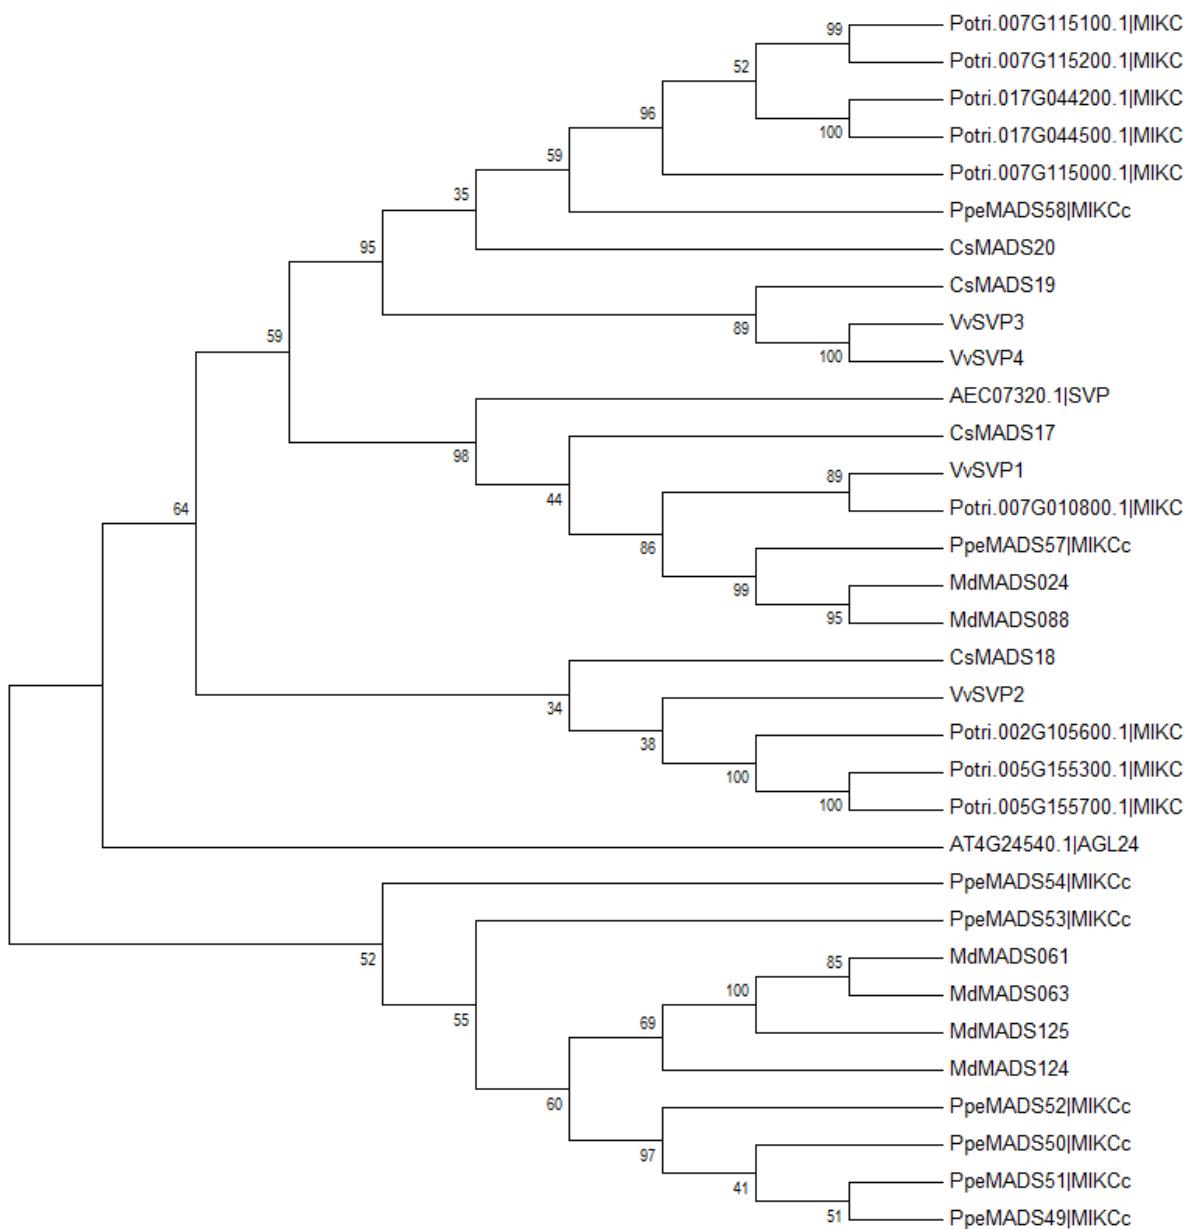

Supplementary Figure S1. Chromosomal location and clustering of 142 MADS-box genes identified in apple. The chromosome number is indicated on the top of each chromosome. The color code represents the MdMADS belonging to different sub-families. The box indicates the 29 gene clusters on 17 apple chromosomes.

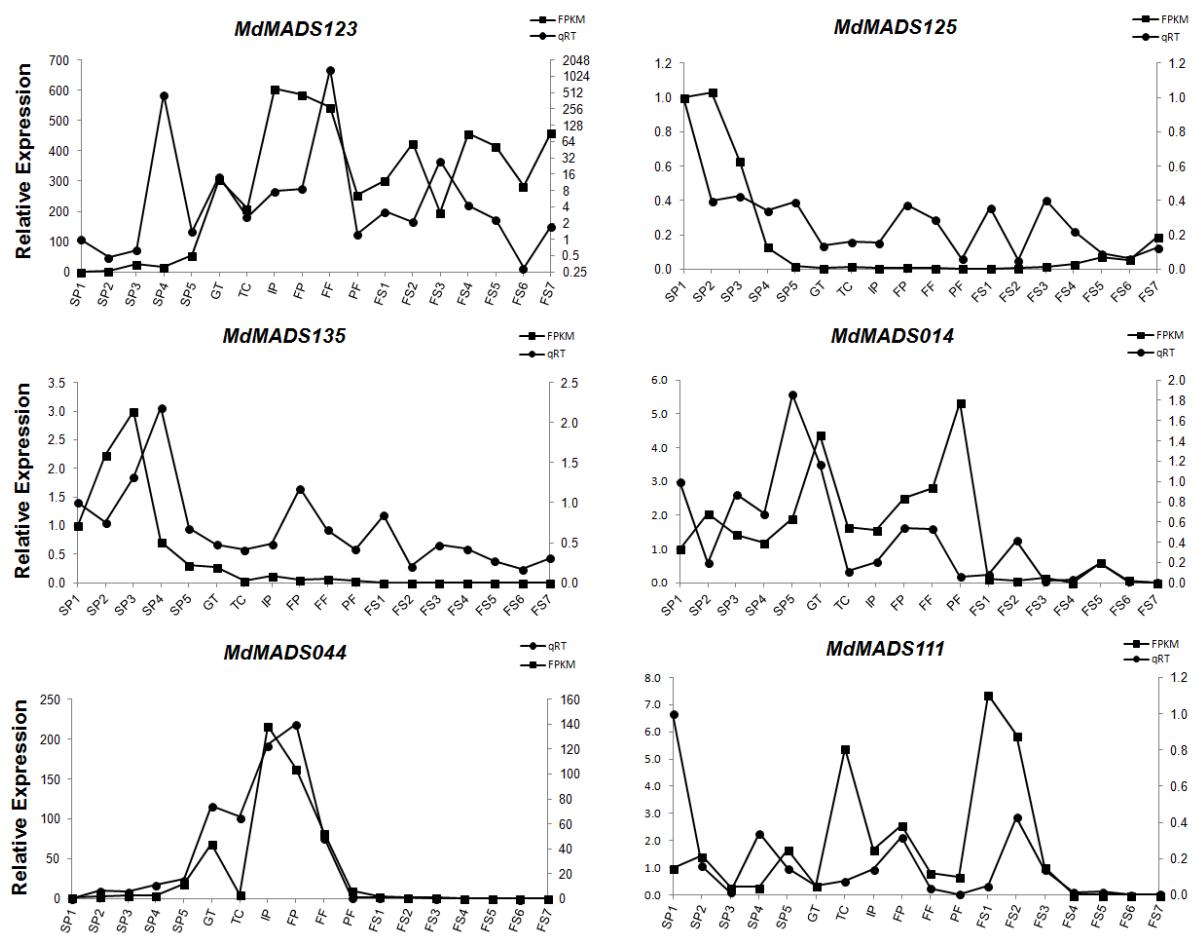

Supplementary Figure S2. Tandem and segmental duplication events in *MdMADS-box* gene family.

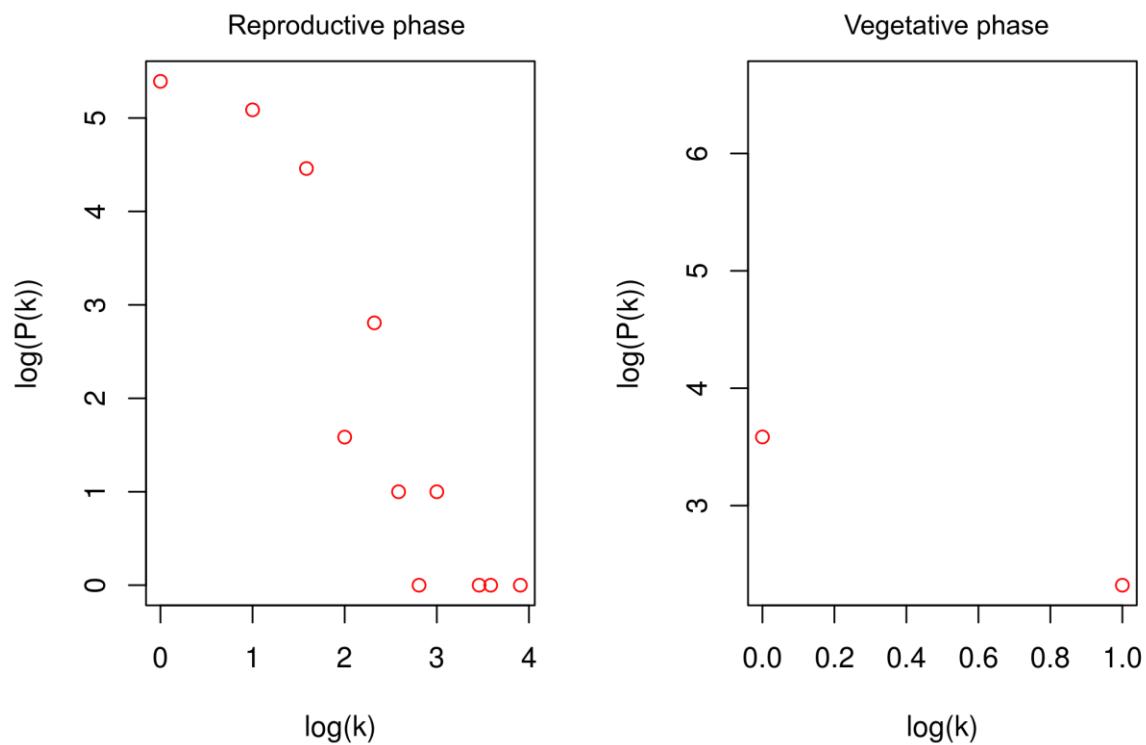

Supplementary Figure S3. Collinear genes pairs of *MdMADS-box* genes on all 17 apple chromosomes. Red lines indicate segmental duplication of *MdMADS-box* on 17 apple chromosomes, and grey lines represent collinear segments other than *MdMADS-box* genes.

Supplementary Figure S4. Phylogenetic tree of SVP orthologs of apple and other eudicots (Arabidopsis, peach, poplar, cucumber and grape).

Supplementary Figure S5. Relative expression of various *MdMADS* genes based upon FPKM based expression value and validated by quantitative reverse transcriptase-polymerase chain reaction (qRT-PCR). Pearson correlation coefficient between fold change FPKM and qRT-PCR was 0.34 (p-value=0.0005)

Supplementary Figure S6. Degree distributions of reproductive and vegetative phase

network. The scatter plots show proteins (x-axis) versus the probability of a protein having k connections (y-axis). The reproductive phase network indicates scale-free nature.

Supplementary Table S1. List of MdMADS, their annotation and orthologs in Arabidopsis.

Reported in present study only

Reported by Tian et al. only

Reported by Tian et al. only, however contains only K domain

Same MdMADSS reported twice by Tian et al.

Supplementary Table S3. The sample abbreviation and their collection intervals.

Developmental stages/Tissues	Sample code	Collection intervals
Apical bud	AP1	0 day
	AP2	38 days
	AP3	70 days
Spur bud	SP1	0 day
	SP2	38 days
	SP3	70 days
	SP4	104 days
	SP5	126 days
Bud break	GT (Green tip)	0 day
Flower	TC (Tight cluster)	10 days
	IP (Initial pink)	15 days
	FP (Full pink)	26 days
	FF (Bloom)	30 days
	PF (Petal fall)	39 days
Fruit	FS1	13 DAP
	FS2	28 DAP
	FS3	44 DAP
	FS4	83 DAP
	FS5	102 DAP
	FS6	132 DAP
	FS7	161 DAP

Supplementary Table S4. List of low temperature responsive elements in 1.5Kb upstream promoter regions of MdDAMs.

DAM genes	Element name	Up-stream transcription start Site	Strand	Motif sequence	PLACE motif ID
