

## **Supplementary Digital Content 3**

Figure. Delphi survey: level of agreement on whether symptoms (page 2), clinical signs (page 3), and additional investigations (page 4) were: (1) sensitive methods of detecting neuropathic pain, (2) specific methods for detecting neuropathic pain, (3) feasible for a non-specialist to assess in a research setting, and (4) feasible for study participants to self-assess symptoms and clinical signs.

# Symptoms

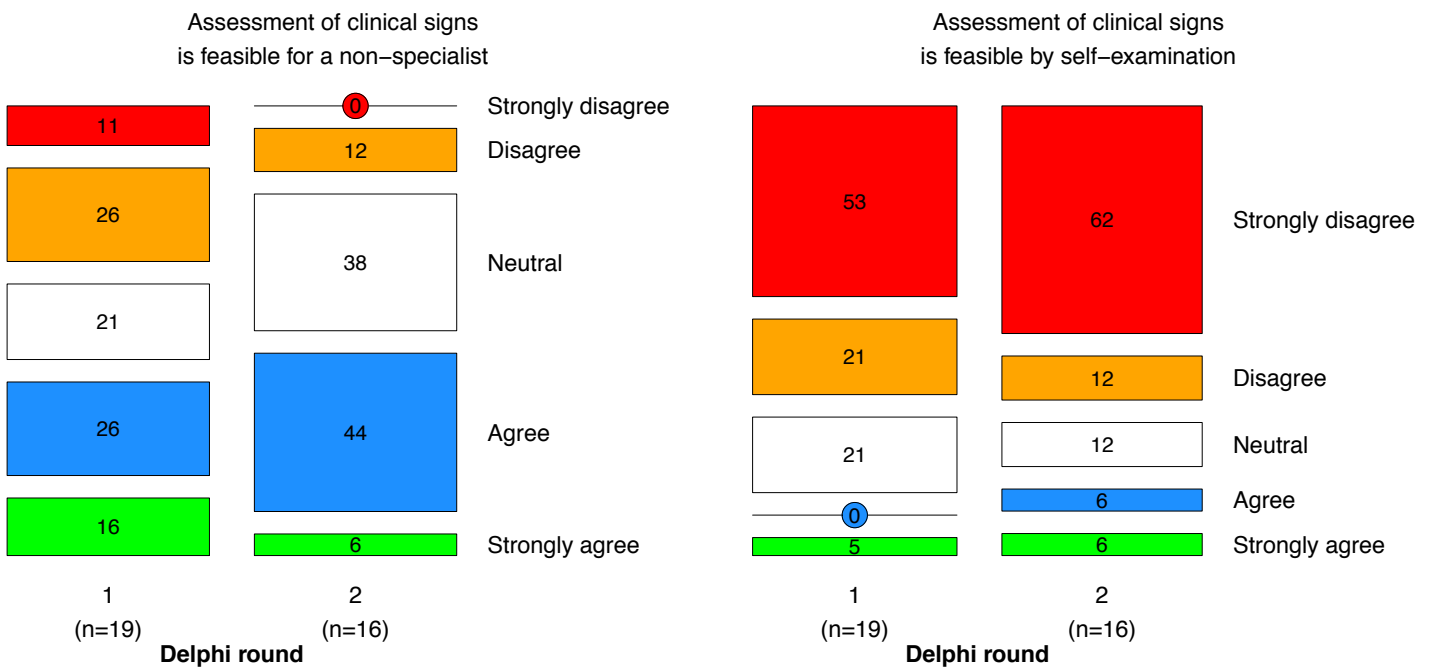

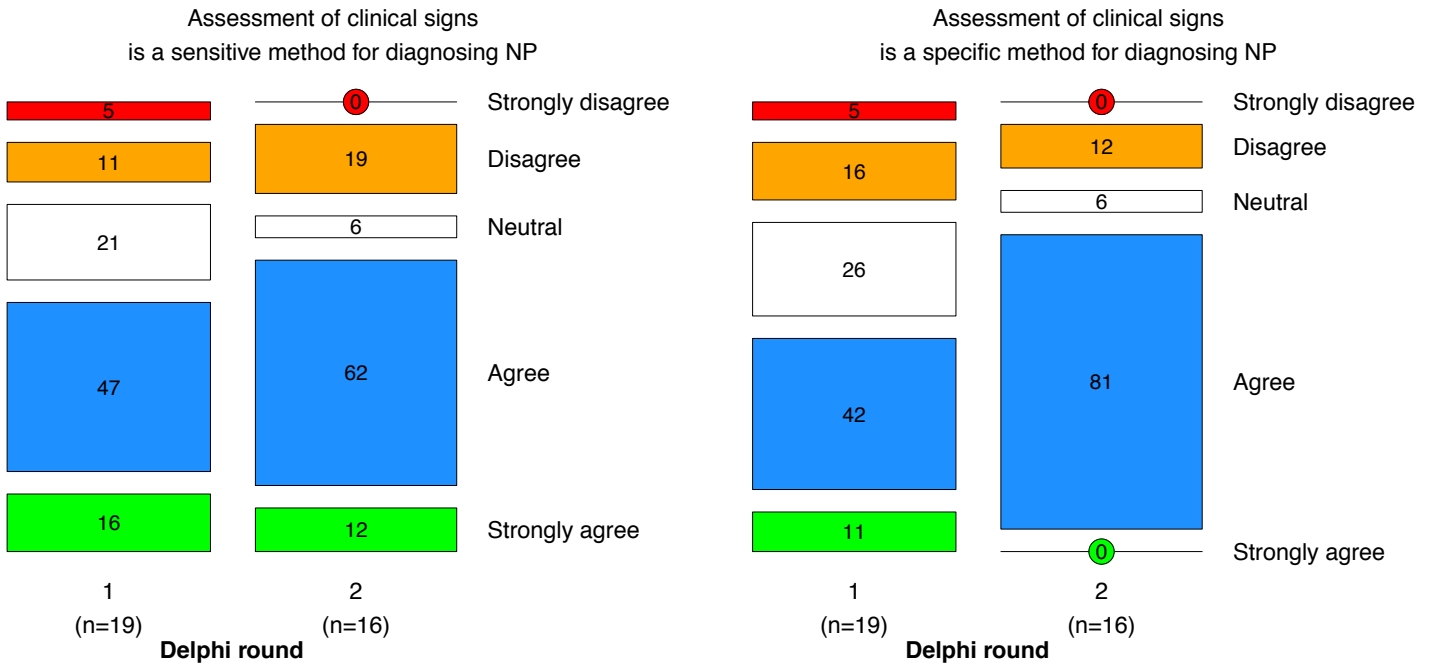

(NP: neuropathic pain)

Numbers in the blocks report percent respondents choosing a category  
 Note: percentages may not match those presented in Table 1 because of rounding

# Clinical signs

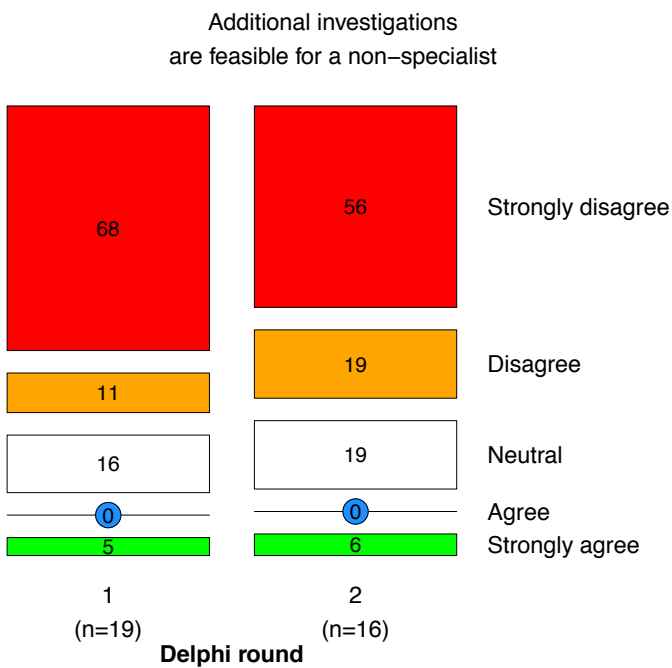

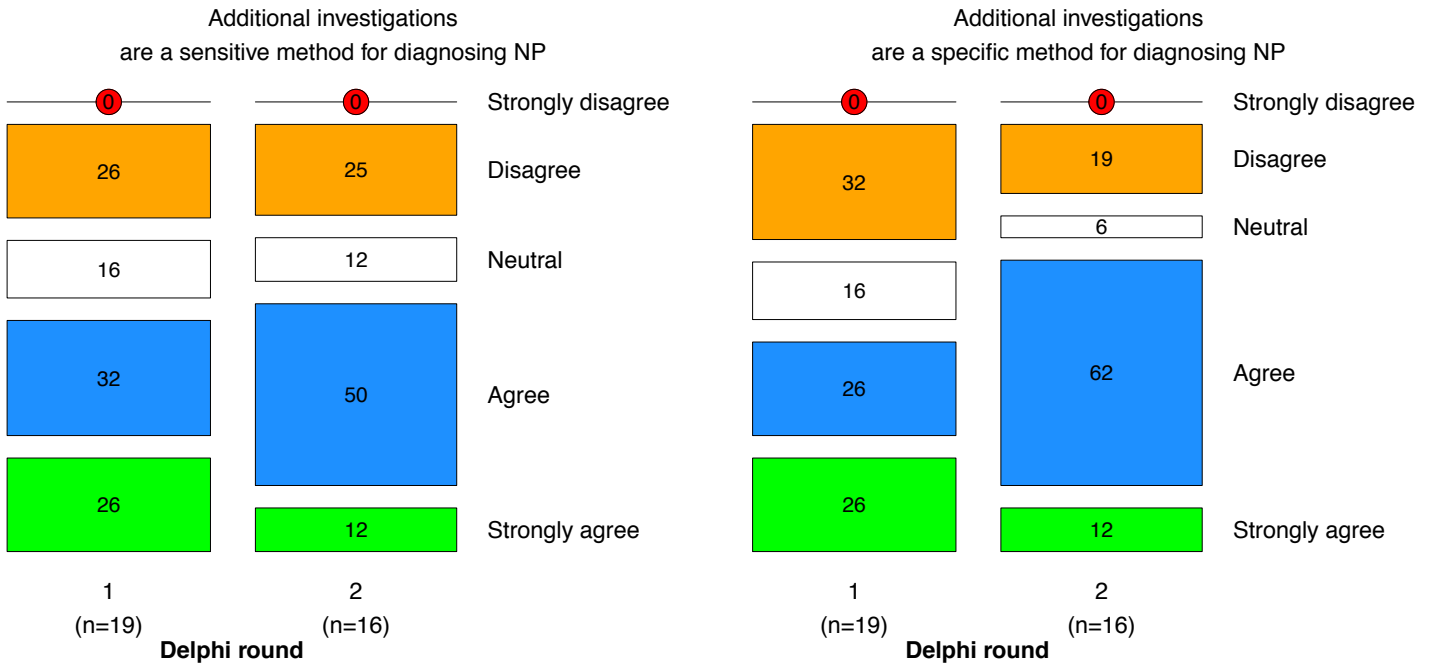

(NP: neuropathic pain)

Numbers in the blocks report percent respondents choosing a category  
 Note: percentages may not match those presented in Table 1 because of rounding

# Additional investigations

(NP: neuropathic pain)

Numbers in the blocks report percent respondents choosing a category  
 Note: percentages may not match those presented in Table 1 because of rounding
