## **Supplementary Digital Content 7**

## Box. Suggested additional phenotypes

## MORE EXTENSIVE PHENOTYPING (based on panel discussion)

- Further demographic information
  - Income and educational level
  - o Family history of chronic pain especially of neuropathic pain
  - o Hand dominance
- · Psychological profiling
  - Anxiety, depression, catastrophizing, somatization, post-traumatic pain disorder, personality
- Detailed pain characterisation
  - o Temporal pattern of the pain (frequency, duration, changes in intensity)
  - o Measures of unpleasantness and suffering
  - o Analysis of multiple pain sites
  - o Assessment of heat hyperalgesia
  - In-depth assessment of pain quality and intensity (e.g., neuropathic pain symptom inventory)
  - o Interval between any inciting event and onset of pain
  - o Further questionnaire tools to increase accuracy of diagnosis
  - Sleep disruption
  - o Past and present pain treatments and their outcomes
- Smaller cohorts, depending on feasibility, may be further phenotyped by:
  - o Clinical examination
  - Quantitative sensory testing
  - o Intra-epidermal nerve fibre density
  - o Test-retest to confirm reliability and stability of phenotype over time
