

Statistical Analysis of EGFR Structures' Performance in Virtual Screening

Yan Li,^{†§} Xiang Li,^{‡§} and Zigang Dong^{*†}*

[†]The Hormel Institute, University of Minnesota, Austin Minnesota 55912, United States

[‡]Department of Physiology and Pathophysiology, School of Basic Medical Sciences, Zhengzhou University, 450001 Zhengzhou, Henan, China

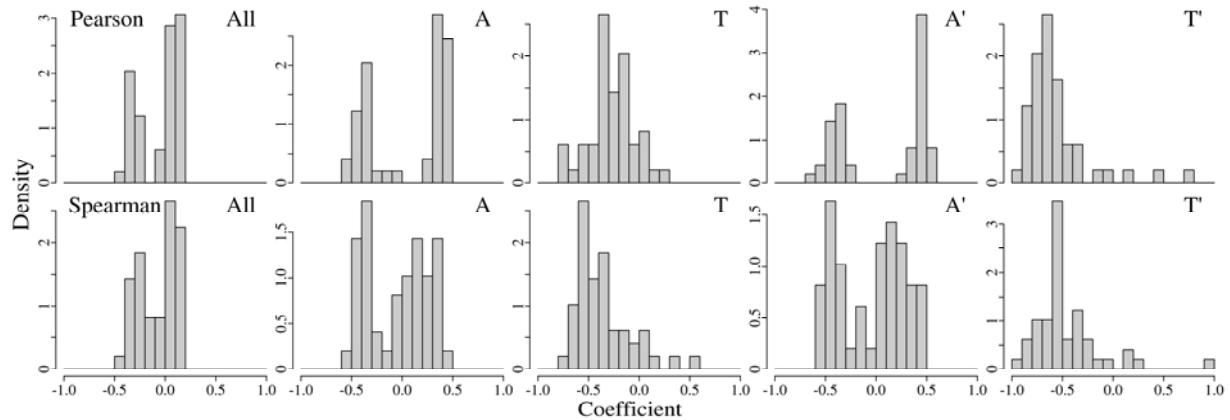

Figure S1. Distribution of coefficients between $C\alpha$ RMSD and EF with each EGFR structure as the template for five ensembles. The Pearson correlation coefficients are shown in the upper row. The Spearman correlation coefficients are displayed in the lower row.

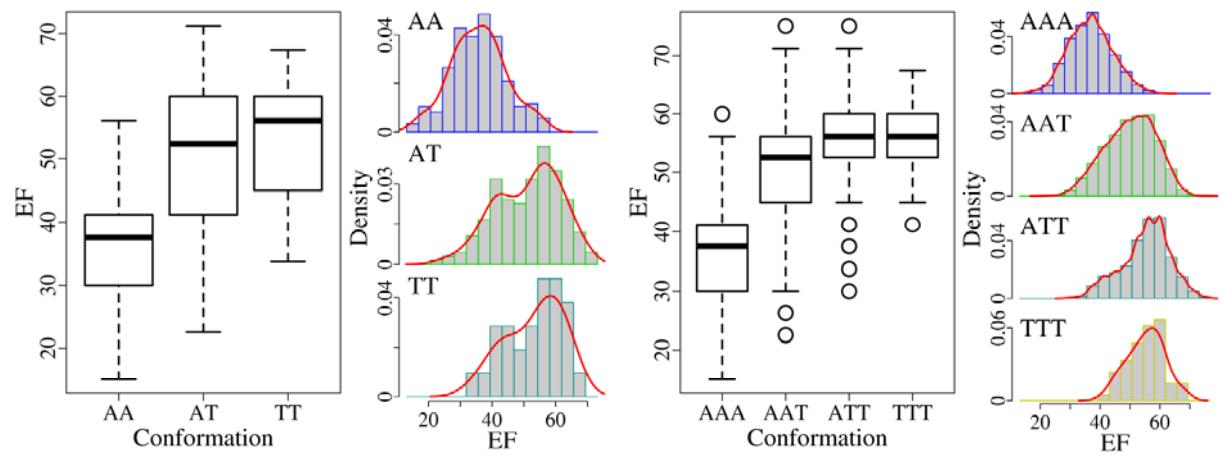

Figure S2. Discernment of two and three EGFR structures in virtual screening with the average score as the ligand score.

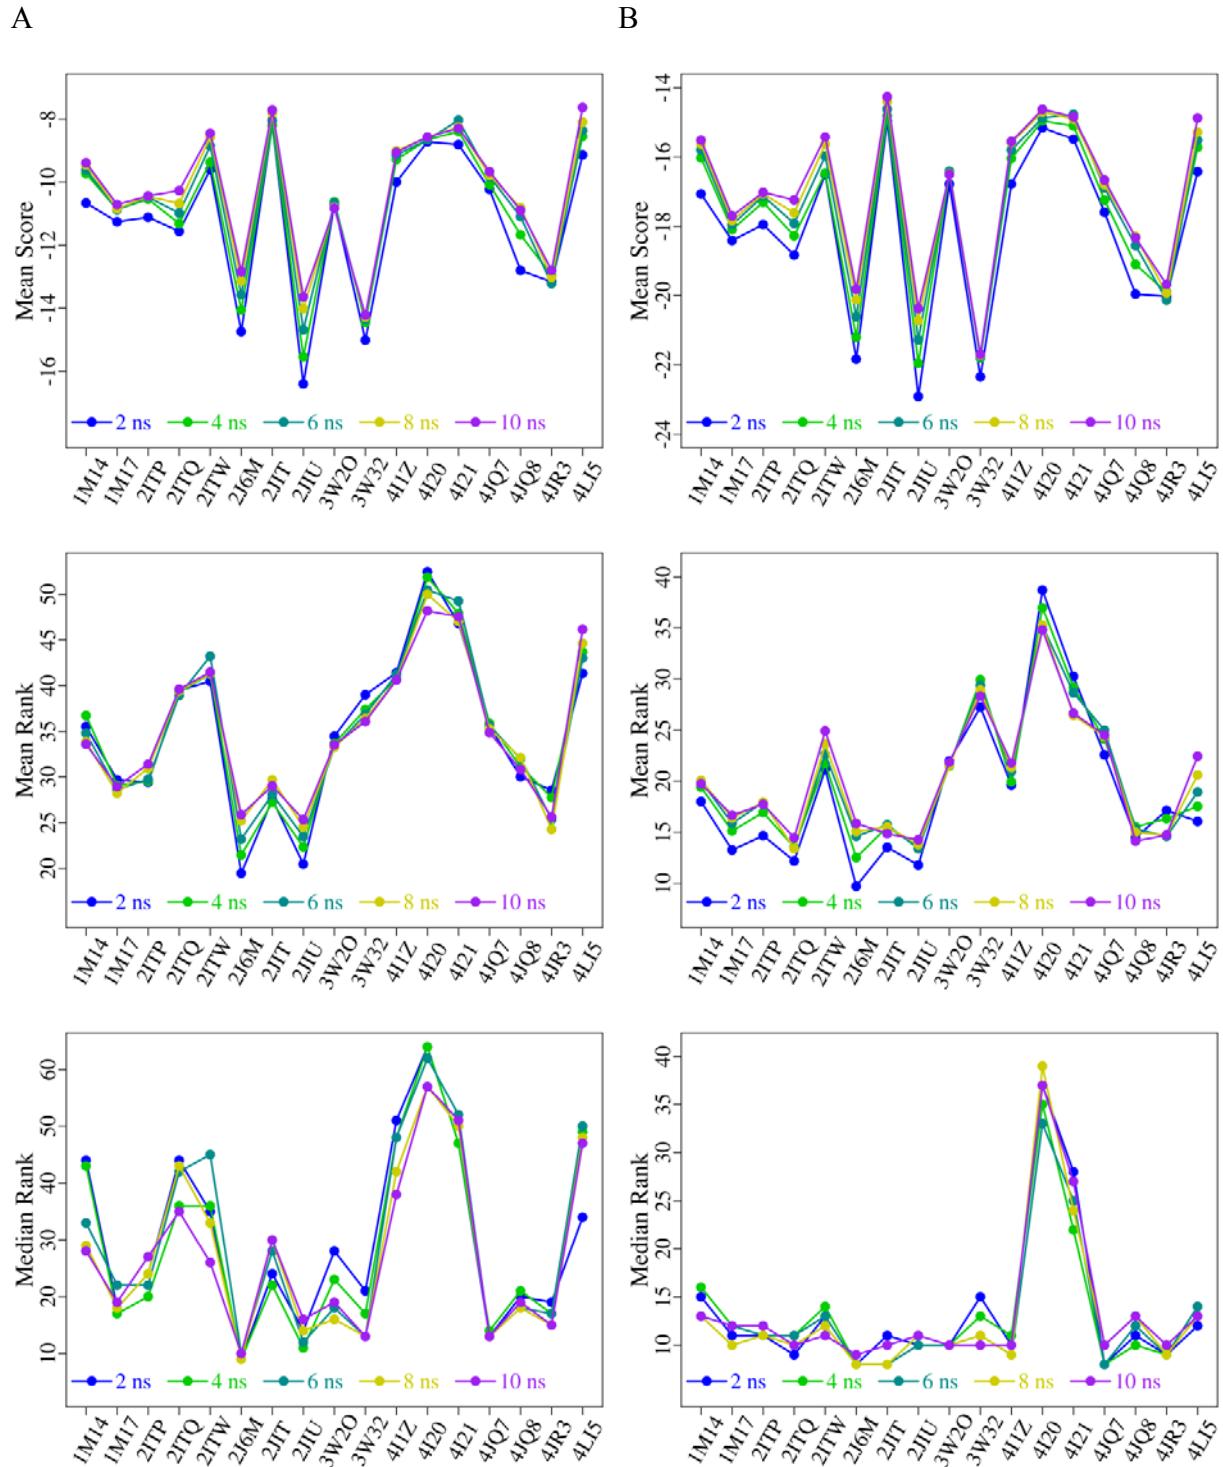

Figure S3. Effect of simulation length on the mean score, mean rank, and median rank of the 15 EGFR inhibitors in MM-PBSA. (A) The IDC is 2. (B) The IDC is 4.

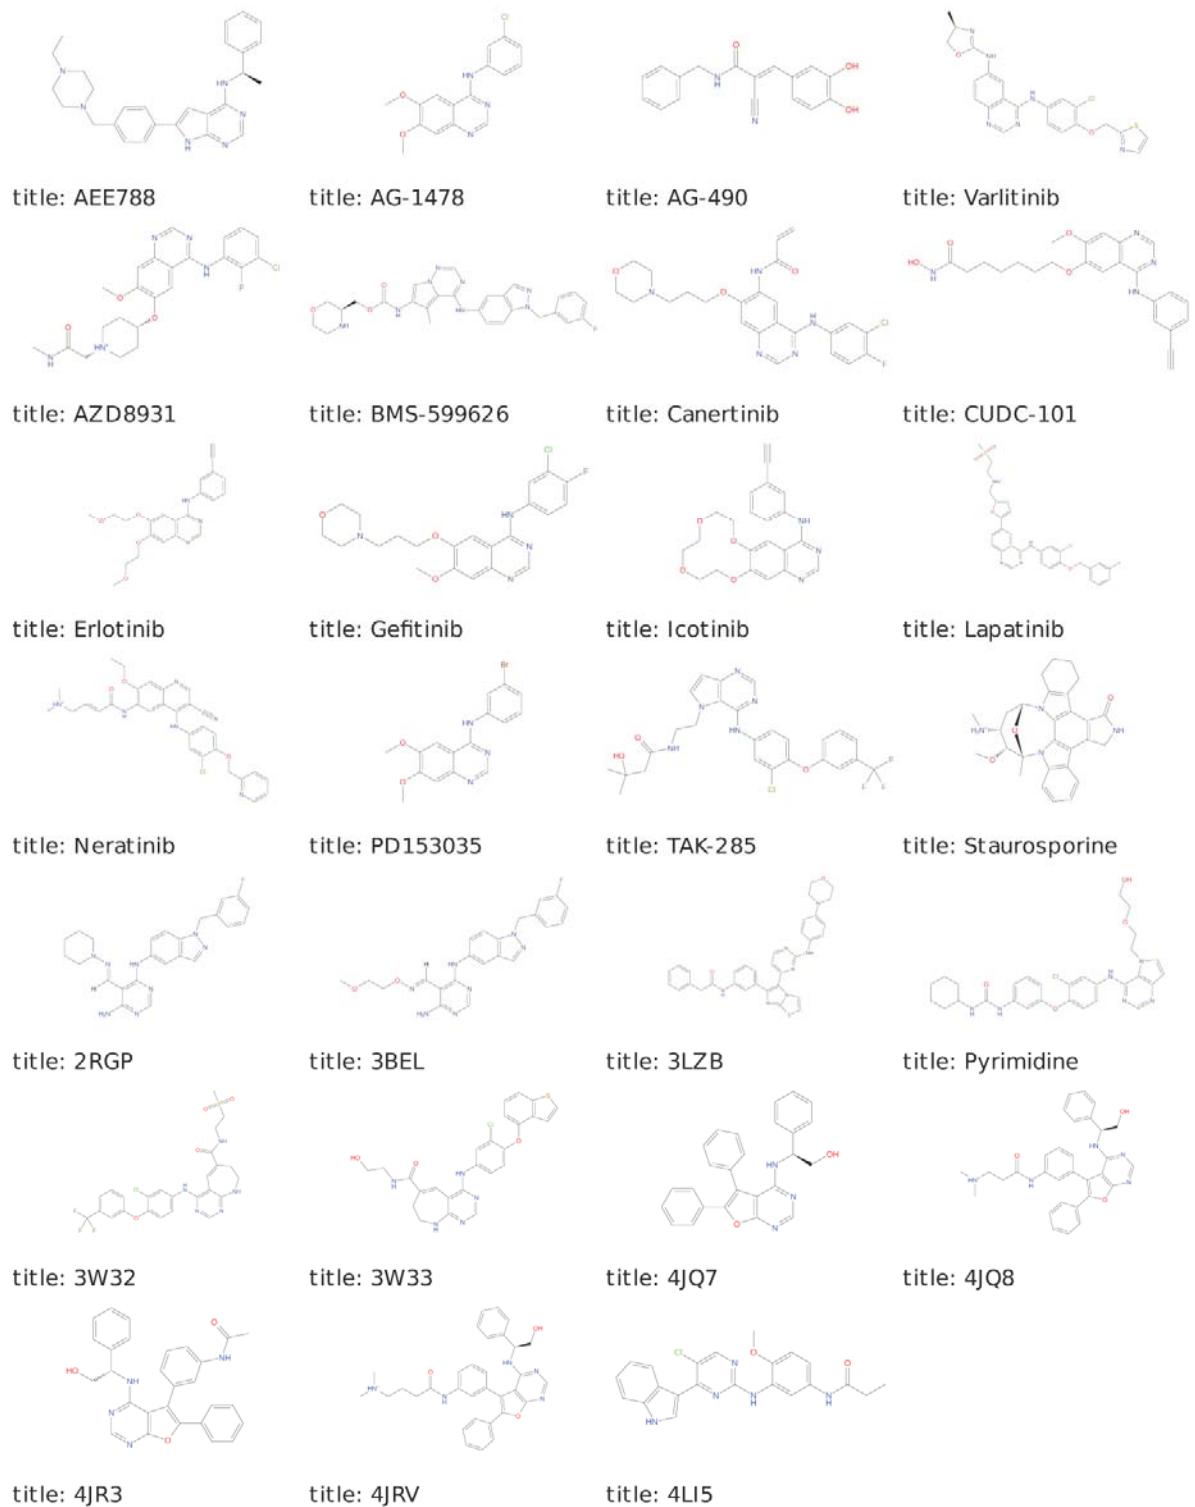

Figure S4. Chemical structures of 27 known EGFR inhibitors.

Table S1. The hypothesis testing results between two ensembles of EGFR structures calculated by T-test and Wilcoxon test as well as the mean EF with the standard deviation.
