

**Table S.1. Model parameters with functional forms of environmental dependence and prior distributions.** Median, blue line, and 95% confidence range, blue shade, of prior distributions are also plotted to aid in visualisation.

Model Parameters	Description	Prior Distribution	References
$Egg_0$	Initial number of non-diapausing eggs per ovitrap	0 (fixed)	
$Egg_0^*$	Initial number of tagged eggs per ovitrap	0 (fixed)	
$Egg_0^0$	Initial number of diapausing eggs per ovitrap	Uniform(0, $10^6$ )	
$Larva_0$	Initial number of larvae per ovitrap	0 (fixed)	
$Pupa_0$	Initial number of pupae per ovitrap	0 (fixed)	
$Naive_0$	Initial number of naive females per ovitrap	0 (fixed)	
$Adult_0$	Initial number of adult females per ovitrap	0 (fixed)	
$\alpha_{pdens}$	Increase in carrying capacity per unit human population density per ovitrap per day	Uniform(0, 1)	
$\alpha_{dprec}$	Increase in carrying capacity per unit precipitation per ovitrap per day	Uniform(0, 1)	
$\alpha_{evap}$	Fraction of carrying capacity retained daily	Uniform(0, 1)	
CPP	Critical photoperiod (photoperiod: fraction of the day with daylight)	Uniform(0, 1)	
$T_{crt}$	Critical air temperature for laying diapausing eggs	$\mathcal{N}(21, 3)$	[1, 2]
$p_s$	Fraction of eggs tagged for diapause each day	Uniform(0, 1)	
$p_n$	Fraction of diapausing eggs exiting diapause each day	Uniform(0, 1)	
$\Delta_T$	$T_w - T_a$ : The difference between water and air temperature	$\mathcal{N}(0, 3)$
