	Study group				
	Control group				

Essential Information Extraction Table Pre-designed by Tian Xu

Assessing of Risk of Bias Tool		
Item	Description	Risk of Bias
Sequence Generation	Describe the method used to generate the allocation sequence in sufficient detail to allow an assessment of whether it should produce comparable groups	Was the allocation sequence adequately
	Comment:	Unclear
Allocation Concealment	Describe the method used to conceal the allocation sequence in sufficient detail to determine whether intervention allocations could have been foreseen	Was the allocation adequately concealed?
	Comment:	Unclear
Blinding of Participants and Personnel	Describe all measures used, if any, to blind study participants and personnel from knowledge of which intervention a participant received. Provide any information relating to whether the intended blinding was effective	Was knowledge of the allocated intervention adequately prevented during
	Comment:	Unclear
Blinding of Outcome Assessors	Describe all measures used, if any, to blind outcome assessors from knowledge of which intervention a participant received. Provide any information relating to whether the intended blinding was effective.	Was knowledge of the allocated intervention adequately
	Comment:	Unclear
Incomplete Outcome Data	Describe the completeness of outcome data for each main outcome, including attrition and exclusions from the analysis. State whether attrition and exclusions were reported, the numbers in each intervention group (compared with total randomized participants), reasons for attrition/exclusions where reported, and any reinclusions in analyses performed by the review authors.	Were incomplete outcome data adequately addressed?
	Comment:	Low Risk
Selective Outcome Reporting	State how the possibility of selective outcome reporting was examined by the review authors and what was found.	Are reports of the study free of suggestion of
	Comment:	Low Risk
Other Bias	State any important concerns about bias not addressed in the other domains in the tool. If particular questions/entries were re-specified in the review protocol, responses should be provided for each question/entry	Was the study apparently free of other problems that could put it at high risk of bias?
	Comment:	Low Risk

A. GPCRND score - Intra-articular injection (Continuous data)

B. WOMAC score - Usual care (Continuous data)
