

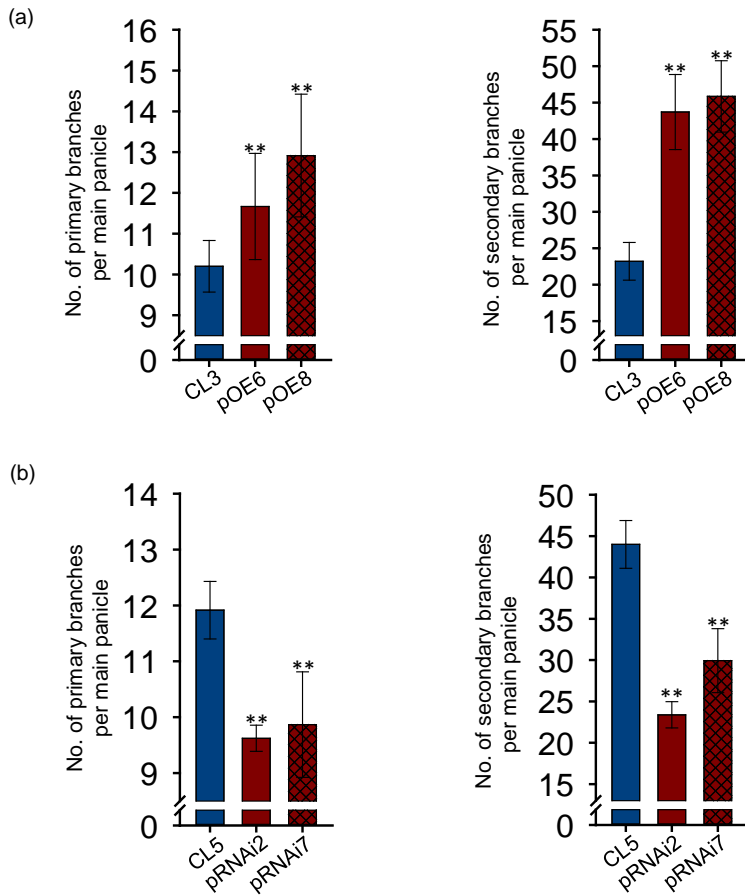

Figure S4

Supplementary Fig. 4 Phenotype of control plant and transgenic plant. (a) Comparison of the number of primary branches and secondary branches per main panicle between control plant (CL3) and *PAY1*-overexpression transgenic plants (pOE6 and pOE8). Data are means \pm s.d. ($n = 30$). (b) Comparison of the number of primary branches and secondary branches per main panicle between control (CL5) and RNAi transgenic plants (pRNAi2 and pRNAi7). Data are means \pm s.d. ($n = 30$). The double asterisks represent a significant difference determined by Student's *t*-test at $P < 0.01$.
