

SUPPLEMENTARY FIG. S2. Cultured T_{CM} cells from two blood donors were latently infected with HIV-1_{NL-43}. On day 17, cells were treated with IL-2 alone or with IL-2 + α CD3/ α CD28 as indicated. **(A)** After 48 h, HIV-1 RNA from culture supernatants was measured. After 48 h treatment, ICp24 **(B)** was measured using flow cytometry. Numbers in **(A)** represent fold induction compared to no treatment control.
