

# Individual prevalence map

## A Cortical thickness

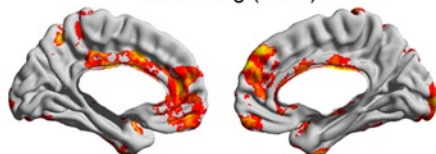

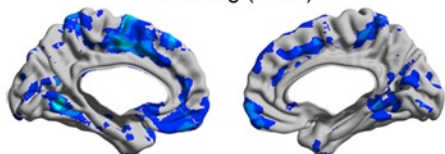

FCD Type-I vs. Controls

FCD Type-II vs. Controls

Thinning ( $z < -2$ )

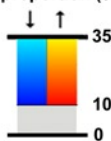

Thickening ( $z > 2$ )

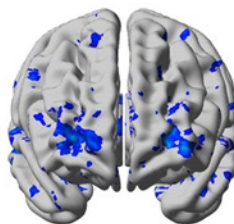

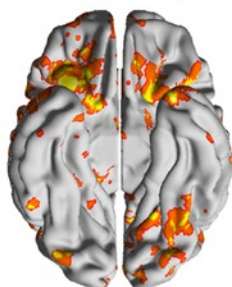

Ipsilateral

Contralateral

proportion (%)

## B Cortical folding complexity

Ipsilateral Contralateral

Ipsilateral Contralateral

Increased complexity ( $z > 2$ )

Decreased complexity ( $z < -2$ )

**Figure e-1. Individual analysis.** At each vertex, the proportion of patients with a thickness (A) and complexity (B) z-score beyond  $\pm 2SD$  relative to controls is shown. Only fractions above 10% are displayed.
