Diagram showing inhibition of α -glucosidase by extracts 14 and 15 at three concentrations.

α -Glucosidase was incubated with extracts at a concentration of 1, 0.1 and 0.01 mg/mL. Results are expressed as the percentage of activity of enzyme incubated with DMSO alone and are the mean \pm SE of three separate determinations. 10 mM Acarbose was used as specific inhibitor of α -glucosidase.
