

SUPPLEMENTARY FIGURE

Supplementary Figure S1: Infection of lactating NP8 mice with LCMV and VV recombinants for the analysis of a specific immune reaction against the LCMV NP₁₁₈₋₁₂₆-epitope in T-Ag_{NP}. **A.** Time line for harvesting the mammary glands after infection; four mice per group were analyzed by immune histology after staining with anti-T-Ag antibodies; a representative experiment is shown. **B** Infection of transgenic mice with 10^5 PFU of VV recombinants containing either the glycoprotein-precursor (VV-G2), the NP of LCMV (VV-YN4) or the T-Ag of SV40 (VV-941T). As negative and positive controls, the same number of not infected (None) as well as with 10^5 PFU of LCMV infected NP8 mice (LCMV) were examined in parallel.
