

293-TLR3
IFN- β

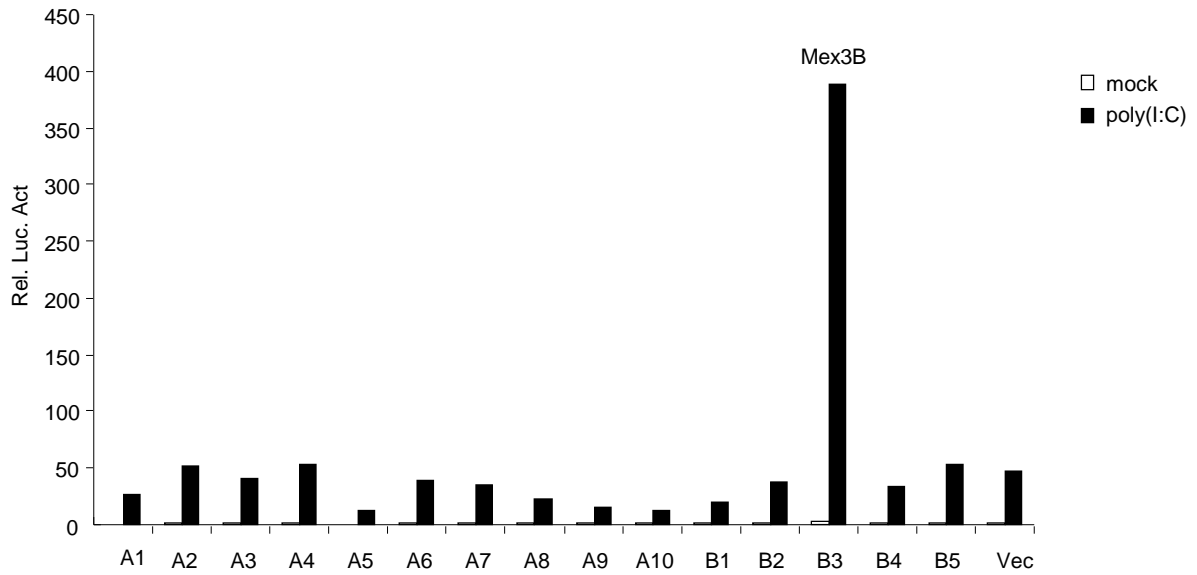

Figure S1. Identification of Mex3B by expression cloning screens.

The 293-TLR3 cells (1×10^5) were transfected with the indicated expression plasmids ($0.05 \mu\text{g}$) and the IFN- β promoter reporter plasmid ($0.1 \mu\text{g}$). Twenty hours after transfection, cells were left untreated or treated with poly(I:C) ($20 \mu\text{g/ml}$) for 6 hours before luciferase assays were performed. An example of the screening data is shown.
