

**Figure S8.** Knockdown of Mex3B impairs recruitment of TRIF to TLR3.

The 293-TLR3 cells ( $2 \times 10^6$ ) stably transduced with control or Mex3B-RNAi were transfected with TRIF expression plasmid ( $5 \mu\text{g}$ ). Twenty-four hours after transfection, cells were treated with poly(I:C) ( $20 \mu\text{g/ml}$ ) for the indicated times. Coimmunoprecipitation and immunoblots were performed with the indicated antibodies.
