Enriched TFBS were found using ToppGene server

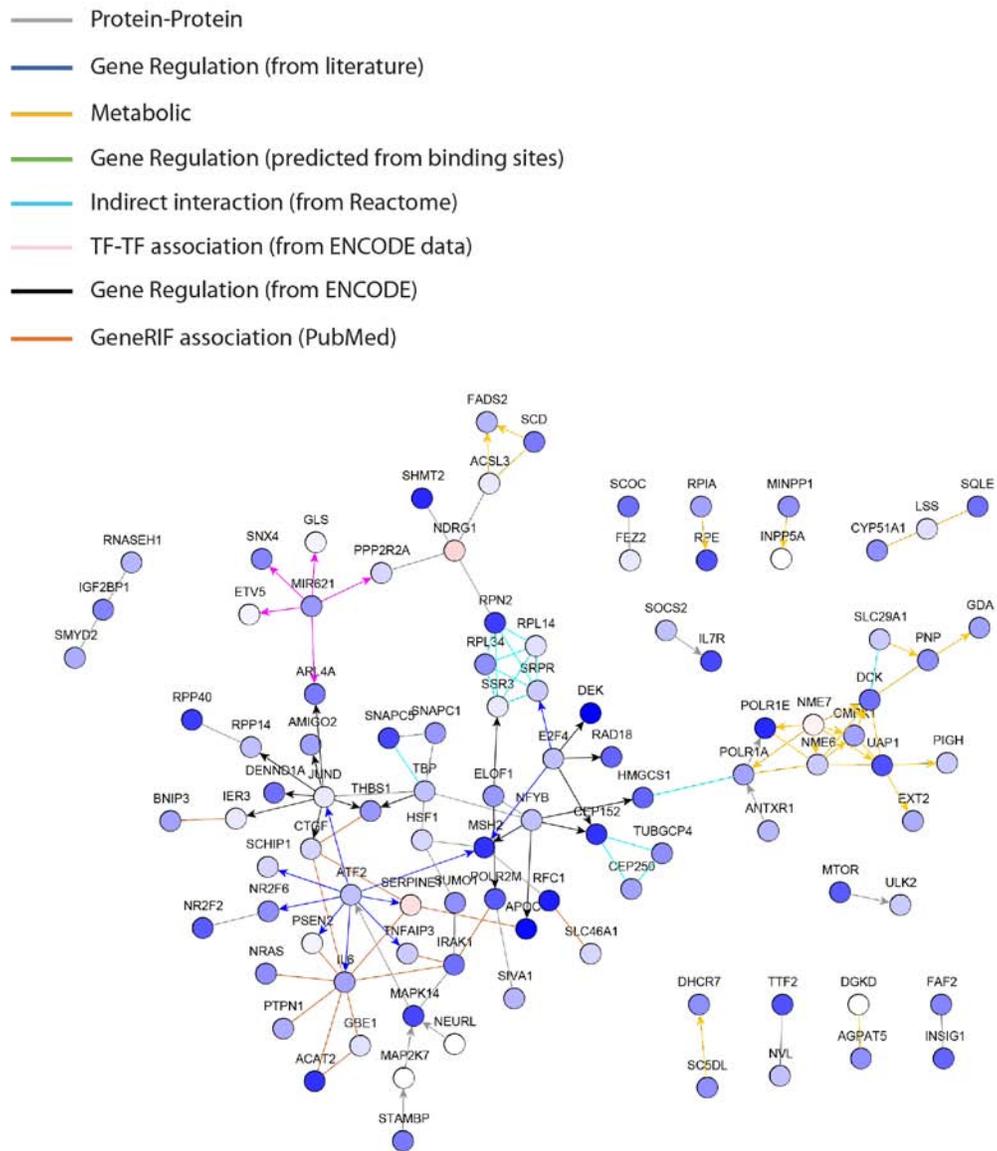

Supplementary Table S3: Transcription factor binding site analysis for genes differentially expressed in both UMSCC1 and UMSCC47, but oppositely regulated (up vs. down)

TF binding site ID	log <i>p</i> -value	Oppositely-Regulated Genes
V\$GATA6_01	1.567	BCL6, BTG2, CLEC18C, COL4A3, DENND1B, FMO1, HOXB3, HOXB6, HS3ST5, KRT15, KRT23, PDGFRA, PFKFB1, PTPRG, PYY, RNF112, SPRY4, SYT7

Enriched TFBS were found using ToppGene server

Supplementary Figure S1: Network analysis was performed with Netwalker software on UM5CC1 and UM5CC47 RNA-Seq data. Labeled Networks 1-5 can be seen in expanded views in Supplementary figures 2-6.

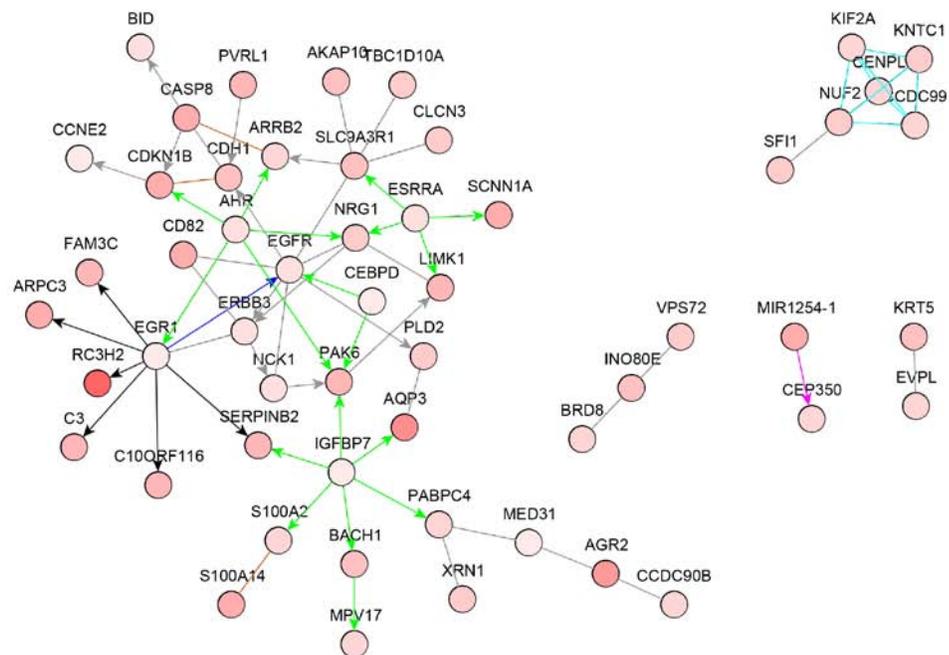

Log DEKsh/NTsh expression in UMSSC1

Supplementary Figure S2: Network 1 is represented, with genes down-regulated in UMSSC1, with log fold change represented. This is the expanded view of the network map highlighted in Figure 1.

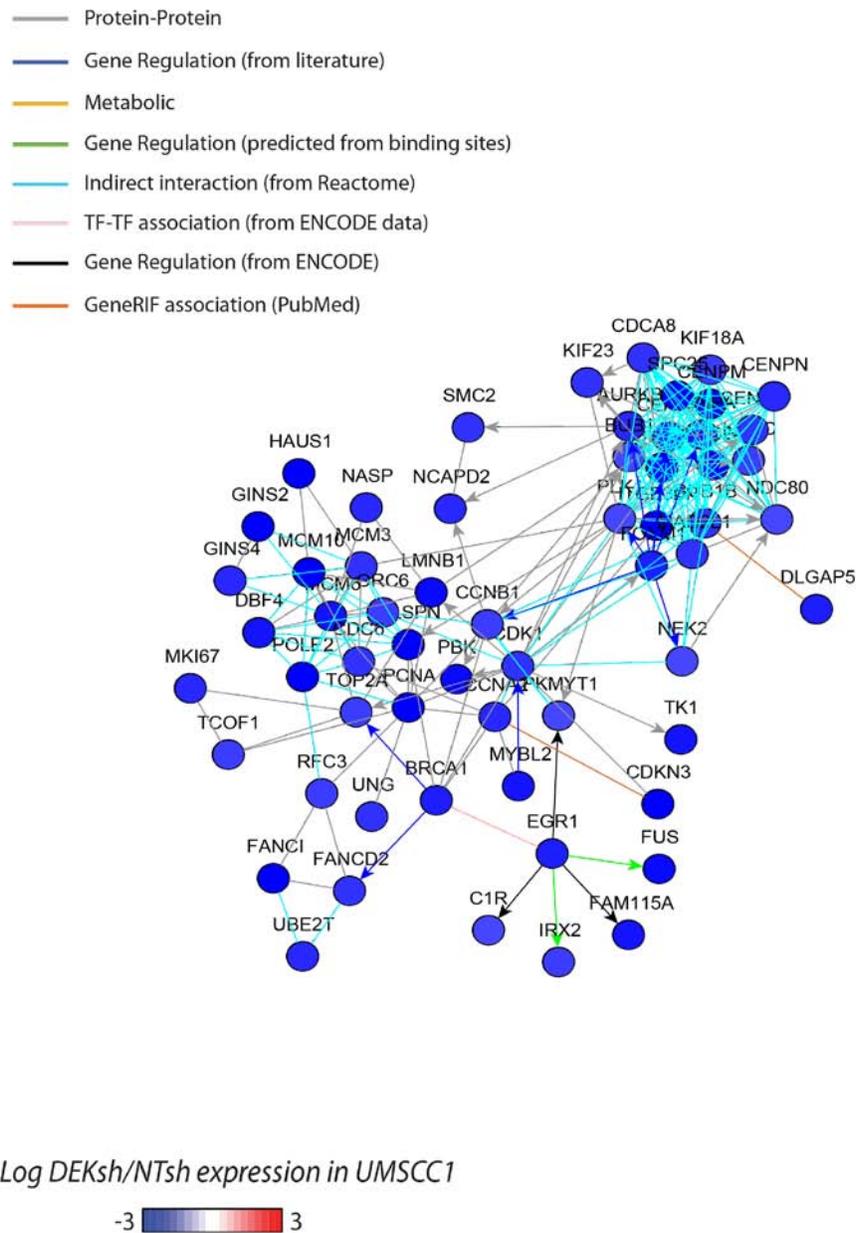

- Protein-Protein
- Gene Regulation (from literature)
- Metabolic
- Gene Regulation (predicted from binding sites)
- Indirect interaction (from Reactome)
- TF-TF association (from ENCODE data)
- Gene Regulation (from ENCODE)
- GeneRIF association (PubMed)

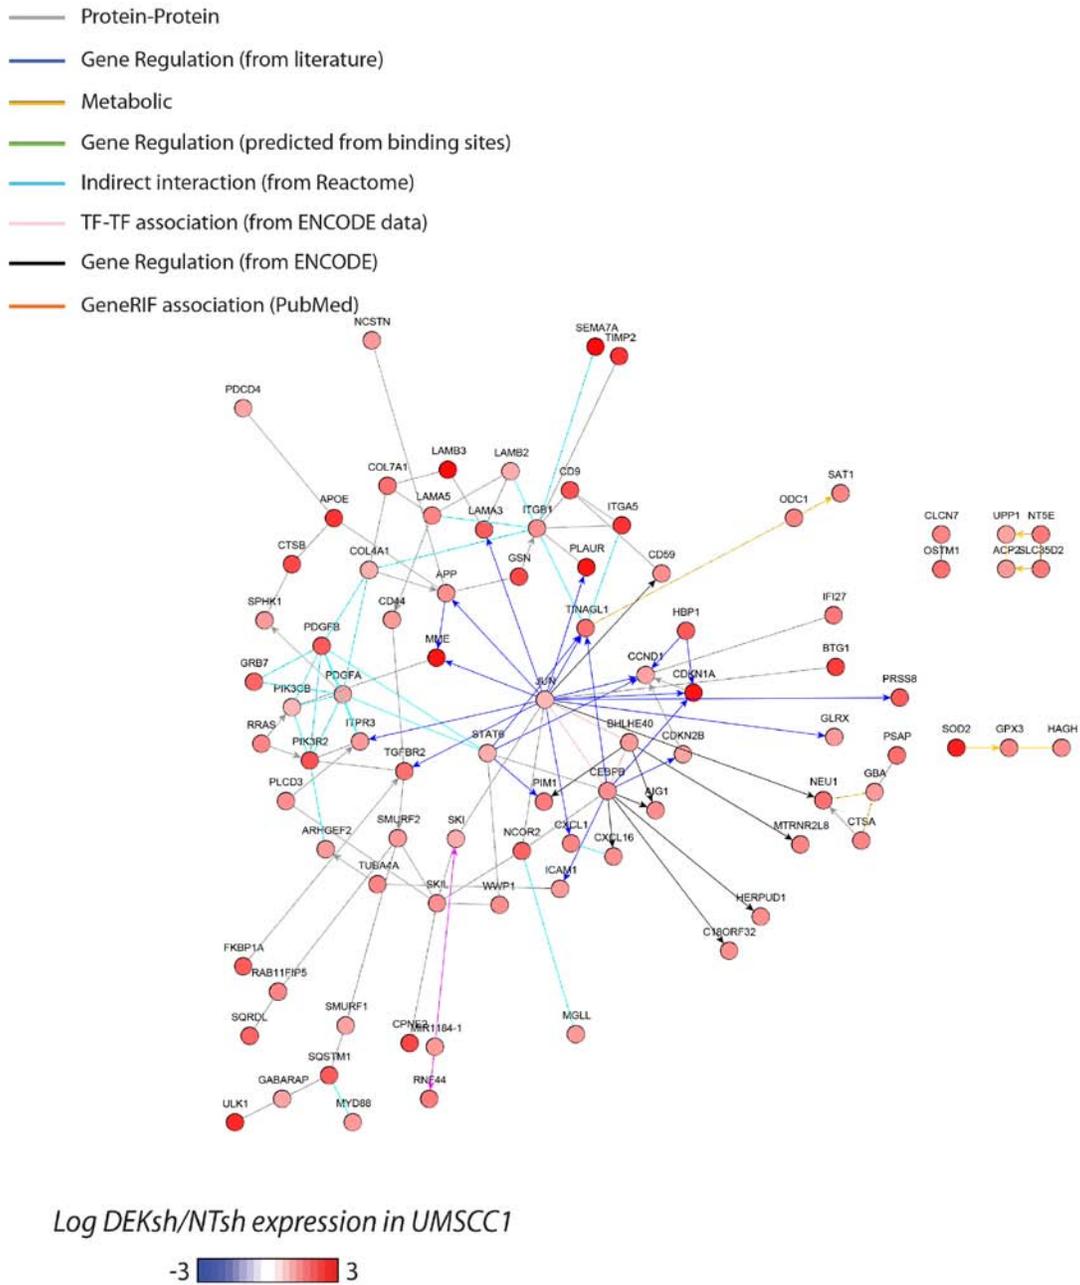

Log DEKsh/NTsh expression in UMSCC47

Supplementary Figure S3: Network 2 is represented, with genes up-regulated in UMSCC47, with log fold change represented.

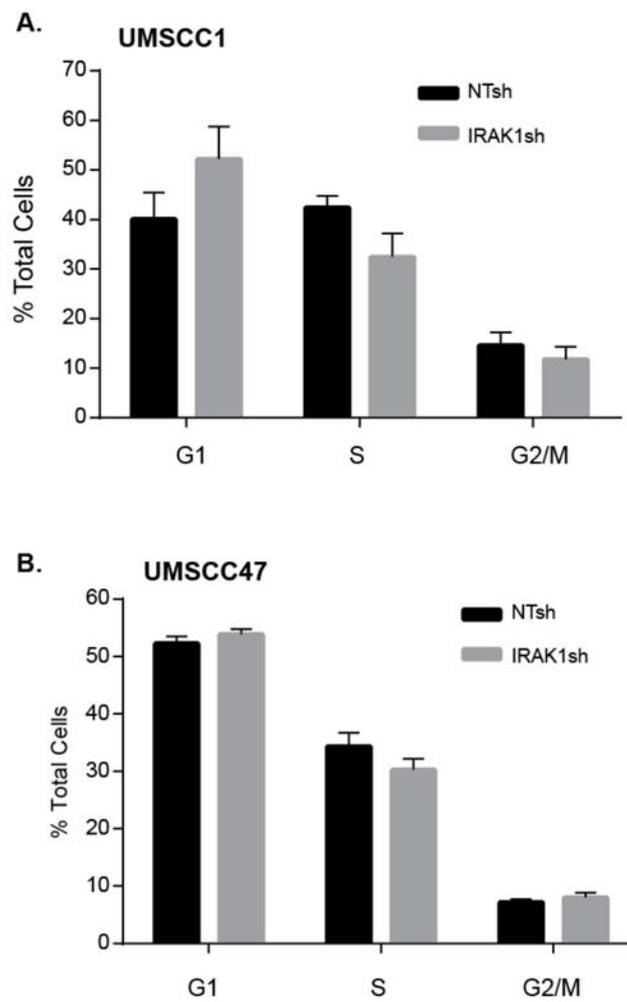

Supplementary Figure S4: Network 3 is represented, with genes down-regulated in UMSCC1, with log fold change represented.

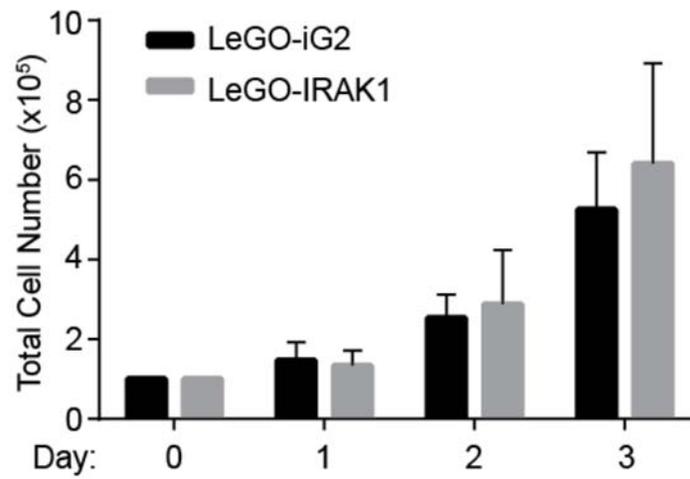

Supplementary Figure S5: Network 4 is represented, with genes up-regulated in UMSCC1, with log fold change represented.

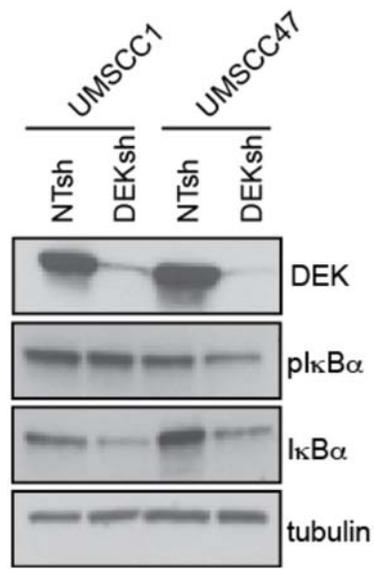

Supplementary Figure S6: Network 5 is represented, with genes up-regulated in UMSSC47, with log fold change represented.

Supplementary Figure S7: UMSCC1 and UMSCC47 cells with IRAK1 knockdown reveals no alterations in cell cycle profiles. BrdU incorporation was measured by flow cytometry to determine G1, S, and G2/M populations. Experiments were performed in triplicate.

Supplementary Figure S8: UMSCC1 IRAK1 overexpression cells (IRAK1) do not exhibit cell growth difference over controls (iG2). Cells were plated at equal densities and counted over three days. Experiments were performed in duplicate.

Supplementary Figure S9: UMSCC1 and UMSCC47 control (NTsh) and DEK-deficient (DEKsh) lysates were analyzed by western blot for phospho and total IκBα. Tubulin was used as a loading control.
