

A

38 Proteins of NF/N with volume spot variation $\geq 10\%$
Analysis with medium confidence (0.400)
147 observed protein-protein interactions
 $5.35e+1$ expected protein-protein interactions

**B**

37 Proteins of TF/T with volume spot variation $\geq 10\%$
Analysis with medium confidence (0.400)
111 observed protein-protein interactions
 $4.19e+1$ expected protein-protein interactions

S4 Fig. Network of predicted associations for all the differentially expressed proteins identified by 2-DIGE. The STRING analysis of the protein-protein interactions was performed using proteins with spot variation $\geq 10\%$ in NF/N (A) and TF/T (B) comparisons.
