

A**B**

S2 Fig. Metformin or telmisartan, but not glipizide and metoprolol, reduced PARP1 activity induced by high glucose or Ang II. (A) HUVECs were treated with or without metformin or glipizide for 6 hr, then incubated with or without 30 mM glucose for 24 hr. (B) HUVECs were treated with or without telmisartan or metoprolol for 6 hr, then incubated with or without 100 nM Ang II for 24 hr (B). PARP1 activity in nuclear extracts of HUVECs was measured accordingly.
