

**Probiotic supplementation does not improve eradication rate of
Helicobacter pylori infection compared to placebo based on standard
therapy: a meta-analysis**

S1: Meta-analysis showed the distribution of diarrhea, nausea, vomiting, bloating, epigastric pain, constipation, headache and metallic taste in the probiotics group vs. non-placebo groups and estimated the OR with a 95% confidence interval and weight percentage.

S2: Meta-analysis showed the distribution of diarrhea, nausea, vomiting, bloating, epigastric pain, constipation in the probiotics group vs. placebo groups and estimated the OR with a 95% confidence interval and weight percentage.
