

Additional file 2. Western blot analysis of hPML isoforms overexpressed in PML-KO MEFs.

Cells were stably transduced with hPML isoforms I to VI. The upper panel shows a WB analysis of hPML expression using a monoclonal antibody (H-238). The bands labeled with asterisks correspond to the expected isoforms according to their sizes. The heavier bands are likely to be SUMO-modified PML. The lower panel shows the same blot reprobed using an anti-FLAG antibody. Actin was used as a loading control.
