

# Sustained Elevated Cytokine Levels during Recovery Phase of Mayaro Virus Infection

## Technical Appendix

**Technical Appendix Table.** International travelers recently diagnosed with Mayaro fever included in the study.

| Case No. | Year of Infection | Country of Infection | Imported to     | Sex | Age, y | Risk Activity (Locality)                               | Laboratory diagnosis | Reference   | Cytokine level testing, days after disease onset |
|----------|-------------------|----------------------|-----------------|-----|--------|--|----------------------|-------------|--|
| 1        | 2014              | Ecuador              | Germany         | F   | 28     | Jungle Trekking (Macas, Puyo, Tena villages)           | Serology             | This report | 26 and 45  |
| 2        | 2014              | Bolivia              | Germany         | M   | 54     | Jungle Trekking (Buonavista village)                   | Serology             | This report | 74, 88, and 117                                  |
| 3        | 2013              | Brazil               | The Netherlands | F   | 52     | Research in the Rainforest (Caxiuna village)           | Serology             | (1)         | 15   |
| 4        | 2013              | French Guiana        | Germany         | F   | 44     | Butterfly Hunting (St. Laurent, Cayenne, Cacao Cities) | PCR and Serology     | (2)         | 16 and 33  |
| 5        | 2012              | Bolivia              | Germany         | F   | 20     | Work in Wildlife Resort (Rurrenabaque Region)          | Serology             | (3)         | 83 and 106                                       |
| 6        | 2011              | Peru                 | Switzerland     | M   | 27     | Vacation in Small Rainforest City (Tarapoto village)   | Serology             | (4)         | 44   |
