

**Supplemental Figure 1: Gateway cloning gene silencing and tetracycline-regulated EhSNAP expression plasmids.** The Gateway cloning plasmid for G3 strain *E. histolytica* gene silencing was derived from the previously reported psAP-2 plasmid (1). The EhSNAP expression plasmid was constructed from the tetracycline-regulated plasmid EhSNAPspFLAG (2), which includes the SNAP gene with codon usage optimized for expression in *E. histolytica*.

**Supplementary Figure 2: Processing of cell monolayer adherence images.**  
Images from adherence assay, pre (left) and post (right) NIH Image J batch processing.

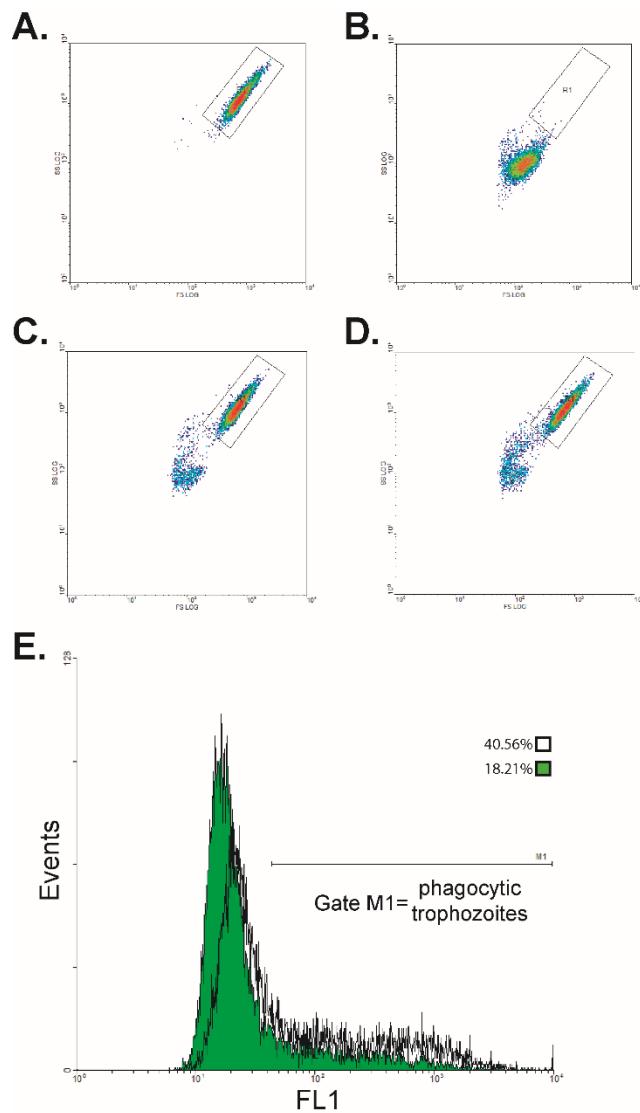

Monolayer adherence image pre-ImageJ

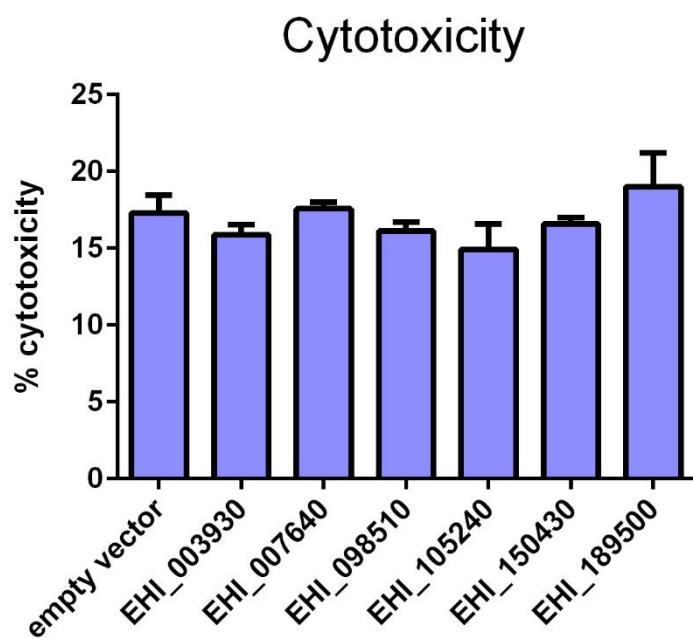

Monolayer adherence image post-ImageJ

**Supplementary Figure 3: Gating scheme for flow cytometry phagocytosis assay.** Data from a representative experiment are shown. (A) Forward and side scatter plot for amebic trophozoites with gating window set on them. (B) Forward and side scatter plot for fluorescently-labeled Jurkat lymphocytes, showing exclusion by the ameba specific gate. (C and D) Forward and side scatter plots for mixed *E. histolytica* and apoptotic (C) or previously healthy (D) Jurkat lymphocytes. (E) Representative fluorescence histograms for gated *E. histolytica* trophozoites after incubation with healthy cells (green) or cells previously killed by apoptosis (white). The M1 gate shows trophozoites with fluorescence above background, which are scored as phagocytic.

**Supplementary Figure 4: Effects of gene silencing on *E. histolytica* killing of host cells.** Jurkat T lymphocytes loaded with the fluorescent dye BCECF were incubated with G3 strain *E. histolytica* trophozoites silenced for expression of the indicated gene or cells transfected with the empty vector control plasmid(30 min, 37°C). Specific cytotoxicity was calculated as % cytotoxicity =  $(\text{fluorescence}_{\text{experimental}} - \text{fluorescence}_{\text{spontaneous}}) / (\text{fluorescence}_{\text{detergent lysed}} - \text{fluorescence}_{\text{spontaneous}}) \times 100$ . The graph shows the mean and SEM for six biological replicates.

**Supplementary Table 1:** Genes targeted for silencing and preliminary outcome.

Gene	Outcome of silencing	Preliminary phagocytosis result	Preliminary adherence result
EHI_003930	Silenced	Reduced	Increased
EHI_007320	Not viable (2 attempts)	N/A	N/A
EHI_007480	Silenced	No effect	No effect
EHI_007640	Silenced	Reduced	No effect
EHI_009570	Not viable (2 attempts)	N/A	N/A
EHI_021260	Silenced	No effect	No effect
EHI_021270	Not silenced	N/A	N/A
EHI_029600	Silenced	No effect	No effect
EHI_045540	Silenced	No effect	No effect
EHI_098510	Silenced	Reduced	No effect
EHI_105240	Silenced	Reduced	No effect
EHI_122800	Silenced	No effect	No effect
EHI_148910	Silenced	No effect	No effect
EHI_150430	Silenced	Reduced	No effect
EHI_167130	Not viable (2 attempts)	N/A	N/A
EHI_167940	Silenced	No effect	No effect
EHI_189500	Silenced	Possibly reduced	Increased
EHI_197040	Silenced	No effect	No effect
EHI_197120	Silenced	No effect	No effect

**Supplementary Table 2:** Raw (non-normalized) and normalized flow cytometry phagocytosis assay data from Figure 1. Phagocytic trophozoites were determined to be trophozoites with fluorescence above unlabeled control, and gated mean represents the mean fluorescence of phagocytic trophozoites. Phagocytic index is calculated as phagocytic trophozoites (or % gated) multiplied by the gated mean. Gated mean and phagocytic index has been normalized to the average of the empty vector strain.

<b>Phagocytosis of Apoptotic Cells (10 minute incubation)</b>			
<b>Strain</b>	<b>% Phagocytic Trophozoites</b>	<b>% Gated Mean</b>	<b>% Phagocytic Index</b>
<b>empty vector</b>	45.33±5.4	100±3.7	100±6.2
