

**Supplementary Figure S5. Size exclusion chromatograph of ESC whole cell lysate.** UV chromatographs showing the elution profile of mouse ESC whole cell lysate from a Superdex 200 10/300 size exclusion chromatography column. Readings at 260nm (DNA), 280nm (aromatic amino acid side chains) and 214nm (peptide bond) and fractions collected (x-axis) are shown. The elution range of most proteins spans until fraction 3D8.
