

Figure e-1 – Mutant DNMI proteins co-localize with wild type DNMI

HeLa cells were co-transfected with RFP-tagged wild type DNMI and GFP-tagged mutant DNMI.

- (a) GFP- and RFP- tagged wild type constructs significantly co-localize.
- (b-d) The GFP-tagged mutant DNMI proteins each co-localize with the RFP-tagged wild type DNMI. Each mutant protein forms puncta in the presence of wild type.
