**Bold text** denotes statistical significance for gene products and if significant Fold change >2 or <-2

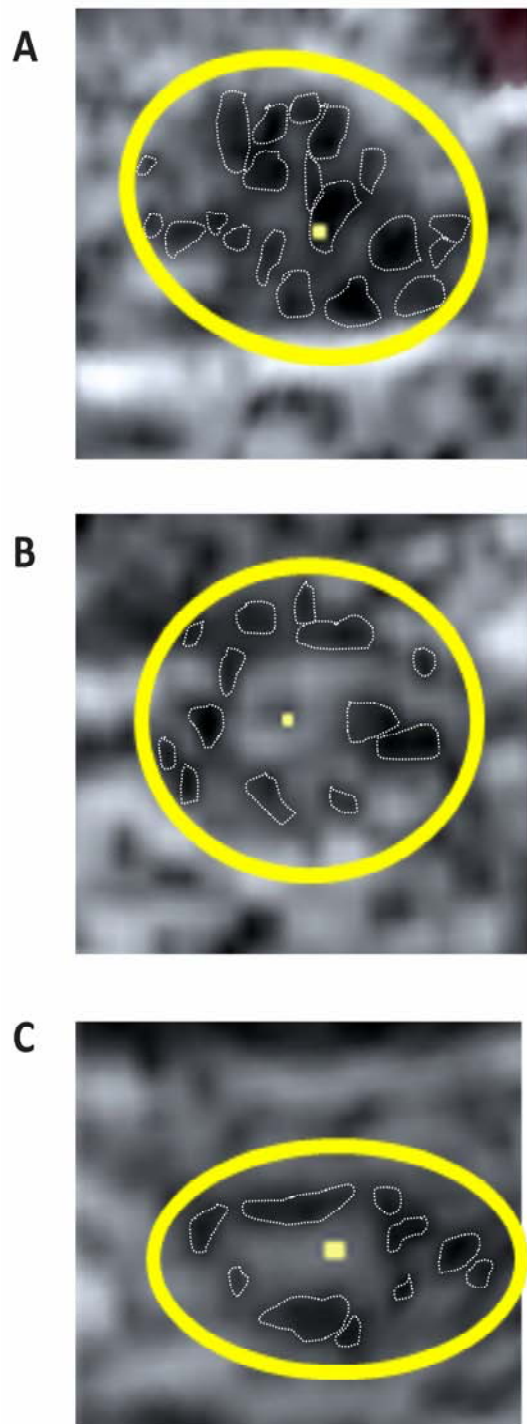

A. Comparisons were performed with Affymetrix Transcriptome Analysis Console (TAC) 2.0 to determine statistical significance and fold change of all mRNAs after RMA transformation (Supplemental Files 7-9)

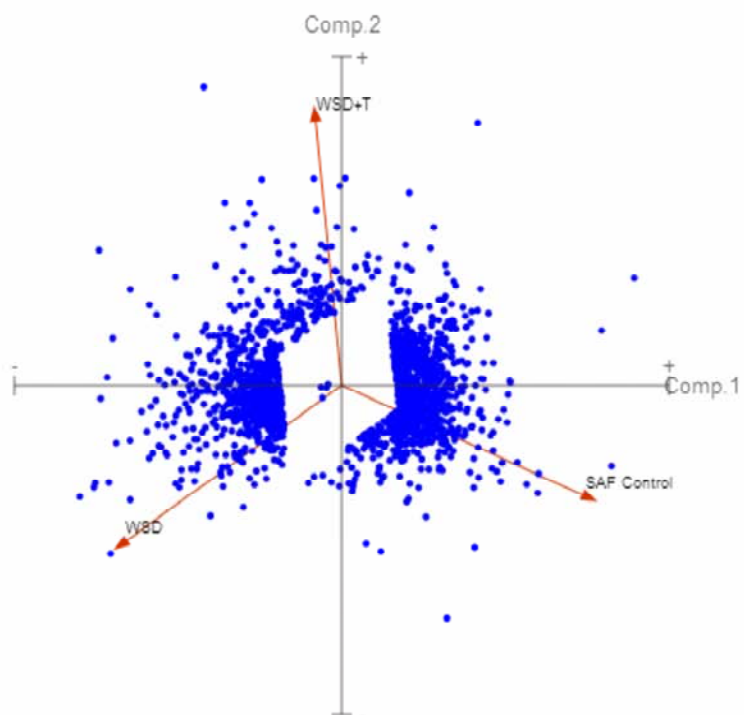

\$Fold change: Positive fold change denotes an increase in expression compared to Control conditions, while Negative fold changes indicate decreased expression by Treatment (Modified from TAC Control:Treatment ratio).

\*When multiple probesets are present for a given gene, preference will be given to probesets with "A" grade annotations and 100% identity to genome and/or target sequence. If more than 1 probeset meets this conditions, the one with the lowest P-value is reported.
