

Supplementary Data

SUPPLEMENTARY FIG. S1. Stimulation of cells isolated from wild-type and Dectin-2^{-/-} mice with different concentrations of *Candida albicans* mutants. Peritoneal macrophages from naïve wild-type and naïve knockout mice were stimulated with several concentrations of *C. albicans* *bmt1/bmt2/bmt5* and *och1* mutants and their parental strains. Values represent mean \pm SEM ($n=8$ mice per group). Significance was determined with Mann-Whitney *U*-test. Statistically different groups are indicated as * $P<0.05$; ** $P<0.01$; *** $P<0.001$. Ca y, *C. albicans* yeast heat-killed.
