

Supplemental Table for:
The Log Odds of Positive Lymph Nodes Stratifies and Predicts Survival of High-Risk Individuals Among Stage III Rectal Cancer Patients
Christina W Lee et al.

Table S1. The LNR and LODDS Models are Correlated Mathematical Constructs.

LNR groups*	LODDS groups*			Total
	LODDS1	LODDS2	LODDS3	
LNR1	73	26	5	104
LNR2	0	17	13	30
LNR3	0	0	30	30
Total	73	43	48	164

*Pearson correlation = 0.799, $p < 0.001$.

Bold face numbers represent the common number of individuals who stratified into both LNR and LODDS groups by each respective stratification.
