Carolina A. P. T. da Silva, Rogério F. Lourenço, Ricardo R. Mazzon, Rodolfo A. Ribeiro, and Marilis V. Marques. Transcriptomic analysis of the stationary phase response regulator SpdR in *Caulobacter crescentus*

**Figure S1.** Expression of SpdR-regulated genes in *cspD* and CC0517 mutant strains at exponential phase. Expression of the indicated genes was analyzed by qRT-PCR using total RNA samples obtained from the wild type NA1000,  $\Delta spdR$ ,  $\Delta cspD$  and  $\Delta CC0517$  strains at exponential growth phase. Results represent the expression of the corresponding gene in each mutant strain relative to wild type cells. Data represent means from two independent biological replicates, with bars indicating the standard error.
