S1 Fig. Delayed eclosion times in *Chd1⁻/⁻* versus *Chd1^{WT/WT}* flies. The following crosses were set up at the same time: *Df(2L)Chd1¹/CyO* x *Df(2L)Exel^{7014}/CyO* and *Df(2L)Chd1¹,P{Chd1^{WT}}/CyO* x *Df(2L)Exel^{7014},P{Chd1^{WT}}*. Male and female offspring of the genotypes *Df(2L)Chd1¹/Df(2L)Exel^{7014}* (***Chd1⁻/⁻***) and *Df(2L)Chd1¹,P{Chd1^{WT}}/ Df(2L)Exel^{7014},P{Chd1^{WT}}* (***Chd1^{WT/WT}***), respectively, were counted at the day of their eclosion and numbers were plotted over time.
