mRNA expression levels were normalized to values in primary brown adipocytes of *Them1^{+/+}* or *Ad-GFP* cells without NE pretreatment (1μM) except *Them1* infected adenovirus groups, which were normalized to values of Ad-*Them1* without NE pretreatment. *P < 0.05 *Them1^{-/-}* vs *Them1^{+/+}* or *Ad-GFP* vs Ad-*Them1*; †P < 0.05, NE pretreatment vs no pretreatment.
